BAY ST. LOUIS, MISS., FRIDAY, OCTOBER 8, 1948

VOL. 57 - No. 41

Observations... From Around Town

(BY JAY WHOZIT)

Saturday, October 16th has been proclaimed by the City Commission Council as a tribute to the Coast Electric Power Association, which will have its tenth anniversary on that day, when its members will meet at the Bay High School in what is expected to be one of the best meetings ever held, with many of its 3800 members in attendance, and Bay St. Louis and Hancock County welcome them with open arms. . . . Saint Stanislaus will celebrate its Homecoming Day on Sunday, October 10th and quite a large crowd of dads and old grads are expected to be on hand to renew old acquaintances and make new friends. The feature attraction will be the football game in the afternoon at Stanislaus Stadium when the unbeaten Reckachaws will meet a strong aggregation of gridirers from McGill Institute of Mobile. . . . St. Joseph Academy made the headlines this week when one of its 1948 graduates Miss Kay Ford, daughter of Postmaster and Mrs. Leo G. Ford, was pictured in many newspapers of the state showing her enrolling in the nurses school of the University of Miss. . . . the first inductees from Hancock County, under the new peace-time draft law, will report for induction on next Wednesday morning at the courthouse here in Bay St. Louis, from where they will be sent to Hattiesburg for pre-induction examination. The first call is for four, whose names will be found elsewhere in this issue. . . . Just a suggestion from yours truly to Brother Alexis, the Stanislaus Alumni and others . . . it would be a fitting tribute to the memory of Brother Peter to change the name of Stanislaus Stadium to Brother Peter Memorial Stadium, on which he spent so much time and effort in order to give "his boys" the best athletic field hereabouts . . . the faculty and students of St. Joseph Academy have decided to publish a school paper this year, which will make its appearance once a month beginning about the first of November, which goes to show that most schools are interested in some form of journalism, since each of Bay St. Louis' three high schools now have a student publication . . . the State Fair opens in Jackson on Monday morning, October 11th, and that day is dedicated to the press of Mississippi, with free admission to everything on the grounds being given to members of the press and their families . . . a press dispatch from Jackson this week says that the Mississippi Highway patrolmen will expand to 100 strong on Nov. 1st, and patrol the state highways in new uniforms and new sedans, swanky, eh? . . . a five-million dollar record breaking pecan crop has been predicted for Mississippi this year . . . well we hope this is correct . . . Mayor Blaise has been on the sick list for the past two weeks, but is doing better, so we hear . . . better get well, Mayor, the speckled trout are biting on the empty hook.

ENTERTAIN AT FAMILY SUPPER

Mr. and Mrs. Roger Heitzmann were hosts on Tuesday evening at their home on deMontluzin Avenue at a family supper complimenting Mr. Heitzmann's brother-in-law and sister, TjSgt. and Mrs. Robert R. Sterneck and son Richard, who left on Thursday morning for St. Louis, Mo., where they will visit Sgt. Sterneck's parents before departing to Langley Field in Virginia. Those present included besides Mr. and Mrs. Heitzmann, and their son and two daughters; Mr. and Mrs. George Heitzmann, Cedric and Henry Heitzmann, Mr. and Mrs. Carl Heitzmann, and son, Jerry; TjSgt. and Mrs. Robert Sterneck and son, Richard; Mr. and Mrs. Higon Coleman, Junior; Coleman, Mrs. Bobby Coleman; Miss Helen Coleman and Mr. and Mrs. John Damborino, Misses Margalo and Honorine Damborino.

BIRTHDAY PARTY FOR JANELE VAN TRIER

On Tuesday evening September 28th, Mrs. Charles J. Van Trier entertained at a birthday party given in honor of her fourteen year old daughter, Janele Kay. Those attending were Misses Mary Lou Seana, Frances Herring, and Joanne Fontenot; Henry Capdepone, Jr.; Martin Noto, Jimmie Bortez, Clem Bortez and Albert Piazza. The young people danced, played games and were served refreshments. Captain and Mrs. Van Trier and J. Nellie have recently moved to Bay St. Louis and are making their home at 250 Stat. St.

Miss Anne Smith, student at Milligan College, Jackson, spent the week end here with her parents, Mr. and Mrs. Carl T. Smith, Mr. and Mrs. Smith and their daughter, who spent Sunday in New Orleans.

St. Stanislaus Celebrates Homecoming Sunday With All Day Program

St. Stanislaus celebrates the Annual Homecoming Sunday with an interesting all-day program. Registration of visitors and we mean home folks as well, takes place beginning at 9 a. m. There will be Mass in the College Chapel at 10:30. The celebrant will be Reverend Louis Eisele, S. J., from Springhill College. Immediately following the Mass, the Alumni will hold its annual meeting in the Big Study Hall. Election of officers will be held and other pertinent business will be discussed.

A barbecue lunch will be served on the grounds at noon. Tickets for this may be obtained when registering.

At 1:45 a motorcade will be formed of Alumni, their families, the Sidelines Club, their families and any others who wish to join. All are asked to obtain an identification card to place in front of their windshield.

The cars will move down Union Street cross the tracks into Booker Street and enter Stadium at Booker Street entrance. Special parking space has been set aside for all taking part in the motorcade. Too, all are asked to participate in the pre-game activities which will end in a special section of the grandstand. Brothers Elbert and Canisius have gone all out in setting up a most prelatious program between the halves. It will be something new for Bay St. Louis.

Bay Waveland Garden Club To Meet Oct. 14

The Bay-Waveland Garden Club will meet on Thursday, October 14 at 3 p. m. at the home of Mrs. E. M. Weston, with Mesdemoiselles E. J. Arceneaux, St. Roger, Bob, Louis, F. Maurius, F. R. Curran, Lewis Henderson, Leo W. Seal, as co-hostesses. This meeting marks the tenth anniversary of the club and is traditional to meet with Mrs. Weston because it was at her home that she and Mrs. Seal called a meeting ten years ago for the purpose of organizing a garden club. The club met with Mrs. Weston for its fifth anniversary meeting.

HELMS-ARCENEUX WEDDING, MONDAY, SEPT. 27

Miss Marie Violette Arceneaux, daughter of Mr. and E. J. Arceneaux, Sr., and Staff Sergeant Dennis E. Helms, son of Mr. and Mrs. V. E. Helms, of Pikeville, Kentucky, were married on Monday morning, September 27 at the home of the bride's parents, at 9 o'clock. The Right Reverend Monsignor A. J. Gmelch, performing the marriage ceremony. Kneeling on Prie-Dieu before an improvised altar, covered with green foliage and fern, and with gold candles on either side, the couple plighted their troth.

The bride given in marriage by her father was very pretty. She wore the wedding dress of her older sister Mrs. P. G. Bernheim, Jr., which was of white brocade taffeta, fastened with a long skirt finishing in a train and made with a bodice of old lace forming a bolero effect. The veil of illusion, which was worn by both of her sisters on their wedding day, was held to her head by butterfly gardenias and Stephanotis. She carried a cascade arrangement of the same flowers centered with a white orchid.

The bride had as her only attendant Miss Kay Applewhite of Brookhaven, Miss., who wore a dress of white taffeta and white lace made along similar lines as that of the bride. She carried a bouquet of lavender spray orchids. Sergeant Helms had as his best man the bride's brother E. J. Arceneaux, Jr. Immediately following the ceremony a reception was held at the home where the bride's mother received wearing a blue satin dress with a corsage of yellow carnations. The reception rooms of the home, which lent itself to the wedding scene were decorated throughout with white gladioli and white asters. In the dining room the bride's table was covered with a lace cloth and centered with a four-tiered wedding cake topped with wedding bells and completing this were silver candelabra holding lighted white candles.

Mrs. Eddie J. Arceneaux, Jr., presided at the punch bowl and the bride's aunt, Miss Marcelle Menou of Iota, Louisiana, cut the wedding cake.

For travelling Mrs. Helms wore a grey wool suit with green accessories. After their honeymoon trip the couple will make their home in Tampa, Florida.

The bride is a graduate of St. Joseph Academy and of the University of Mississippi.

SPEAKER

WILLIAM M. COLMER

The principal speaker at the Annual Meeting of the Coast Electric Power Association to be held in Bay St. Louis, at the High School Gymnasium, October 16, 1948, will be Congressman William M. Colmer.

Bill Colmer has represented the Sixth Congressional District in the House of Congress for the past 8 terms, and was reelected in the August Primaries of 1948 to represent his district in the 81st, and 82nd Congress.

In Bill Colmer Rural Electrification has a friend. He has from its inception moved to the front to aid Coast Electric Power Association, particularly in the early days of its organization when it really needed assistance from men of influence in Washington.

Little Children Of S. J. A. Received Into Sodality

The little children of St. Joseph Academy were received into the Guardian Angel Sodality on Tuesday afternoon October 5th, at Our Lady of the Gulf Church with Monsignor A. J. Gmelch, officiating. The sodalists attended 7 o'clock Mass and the Reception took place at 2:30 p. m., followed with Solemn Benediction.

MEMBER OF LEGISLATIVE COMMITTEE

JOHNSON S. SHAW

Hancock County received a distinct honor at the convention of the Board of Supervisors Association held in Jackson last week, when Johnson S. Shaw, member of the Board from Beat three was elected a member of the Legislative Committee of the Association, defeating Mr. Turner of Greene County.

Mr. Shaw is serving his third term as a member of the Board of Supervisors of Hancock County. He was appointed to fill the unexpired term of his father who died shortly after being re-elected in the August Primaries of 1943. The November election was too near to allow the names of candidates to be printed thereon, and in this election he was named to the full term, to which his father had been nominated as a write in candidate.

He was reelected by a large majority by the people of his district to represent them again in the primaries of 1947.

Mr. Shaw operates the Shaw Bus Lines. He is married to the former Miss Eunice Sweeney and they have five children: Carl, Mrs. Herman Ladner, Billy, Calvin II, and Gerald.

Mrs. Jules Menou, Miss Julia Menou, Miss Marcelle Menou and Andree of Iota, La.; Mrs. J. Bourgeois of Riverside, California; Mrs. P. G. Bernheim, Sr., Miss Eleanor Bernheim, Mr. and Mrs. P. G. Bernheim, Jr., and young daughters of Gulfport, Mr. and Mrs. J. H. Bone Jr., of New Orleans.

S. J. A. PARENTS CLUB MEETING HELD TUESDAY

The S. J. A. Parents Club met in the school library on Tuesday, October 5th, at 3:15 P. M. In the absence of Mrs. F. R. Curran, president, Mrs. John Damborino, vice-president, called the meeting to order. Mother Blanche, Sister Raphael and twenty-nine members were present.

The September minutes were read and the financial report given. New members were introduced.

Plans were made for the Spaghetti Supper, which is to be held at the K. of C. Hall on Wednesday, October 20th, at 5:30 p. m. Price per plate will be \$1.00, drinks are extra. Supper will be served to take out.

Chairmen have been selected and will be published later.

Class mothers are asked to contact Mrs. Roger Boh: to have required number of tickets mailed to parents on their lists.

The Juniors and Seniors won the attendance prize. Mr. J. P. McAlpin won the door award which was divided with the club treasury.

Co-hostesses this month were Mrs. L. Kergosien and Mrs. M. Kergosien.

Rinaldo A. Haas Dies Suddenly At His Home At Kiln

Rinaldo A. Haas, 52 year old Kiln resident, died suddenly at his home on Sunday night at 10 o'clock of a heart attack.

Mr. Haas was a veteran of World War I was buried from his home on Tuesday afternoon at 3 o'clock with full military honors. The Clement R. Bontemps American Legion Post 139 of Bay St. Louis officiated at the funeral. Interment was in the Bayou Coco cemetery with religious services conducted by Rev. Father Wolfe.

Mr. Haas was son of Mr. and Mrs. Jerry Haas. He is survived by his wife Viola Cuevas Haas, three daughters, Mrs. Verdie Lee Ladner of Bay St. Louis; Miss Jane Haas, Miss Marie Haas, both of Kiln; four sons, Wallace Haas, Jr., who is now stationed in Germany; Wesley Haas, Fayette, Miss.; Noel Haas and Rinaldo Haas, Jr., both of Kiln. Mr. Haas was in the lumber business owning and operating his own mill. He was a member of one of the oldest families of the county. He leaves quite a number of other relatives.

"Racial Understanding" Discussed At Episcopal Guild Meetings

The Guild of Christ Episcopal Church met on Tuesday of this week at the home of Mrs. E. N. Science with Mrs. H. A. Eldredge and Mrs. Walter J. Gex, Jr., co-hostesses. The devotionals were given by Mrs. E. P. Kirkpatrick. Mrs. Rene de Montluzin, Jr., gave a most interesting exposition of the program theme, "Racial Understanding" with a message to the group besides giving them pertinent statistics on what the Episcopal church is doing for the negroes in Mississippi. She also suggested what the Christian attitude to the Jews and other minority groups should be.

Ladies attending each brought used clothing and a box was packed to be sent to the Negro Industrial School in Okolona.

Refreshments were served and a social hour enjoyed.

Chapter No. 2, of the Guild met on Wednesday evening at the home of Mrs. Walter Dupiquier and Mrs. deMontluzin gave the same program.

Rotary Club Attends Shrimp Boil

As the climax of the attendance contest during the month of September, half of the Bay St. Louis Rotary Club was treated to a shrimp boil last Wednesday evening by the members of the other half. The affair, given at the Pass Christian Yacht Club by the team headed by Dennis Tonkel, honored the opposing team led by Dr. B. F. Floyd. Thirty-two members of the Rotary Club were present, and several members of the Pass Christian Club attended as visitors.

As a result of the September contest, attendance at the Rotary Club during the month of September reached the high level of ninety-two per cent.

Miss Agnes Wentworth's Grandchild Dies from Fall

Miss Agnes Wentworth was called to Hattiesburg on Monday, on account of the death of her grandchild, Ann Lindsey Wentworth, eight year old daughter of Mr. and Mrs. Edwin Wentworth of Hattiesburg.

The child fell at its home and though all examinations were made by the physicians there the parents were advised to take her to New Orleans for further examination. The child died between Hattiesburg and New Orleans.

Miss Madge Allred Named Home Demonstration Agent for Hancock County

Miss Madge Allred of Collins, has been appointed Home Demonstration Agent for Hancock County and has assumed her duties.

Miss Allred is the daughter of Mrs. W. W. Allred and the late Dr. Allred and has served as assistant Home Demonstration Agent in Forrest and Jones Counties. She is a graduate of Mississippi Southern College with a major in Home Science.

Miss Allred says she is concentrating on 4-H Club work for the month of October. She is no stranger to Bay St. Louis; her late father practiced medicine in this county and was associated with the late Dr. A. A. Kergosien.

W. B. A. Entertains Officials of Society At Supper

On Monday, September 27 the Womens Benefit Association entertained at a buffet supper at the home of Mrs. A. J. Noto honoring Mrs. Pearl H. Croy, state field director, and Dr. Annie Reynolds, supreme medical advisor and Mrs. Fay Argueas, District deputy.

Dr. Reynolds, who is now retiring, is touring the Southern states on her way to her home in Tacoma, Washington, and was a special guest at the luncheon. Dr. Reynolds has given 26 years in service for the association. She expressed her appreciation of the work done in the Bay St. Louis Review No. 10 and how much she enjoyed her contacts made here with special mention to Miss Miriam Engman who has worked for years with this Review. Miss Engman's mother the late Mrs. Bertha Engman was the organizer of the local Review.

"Our Debt To Israel" Discussed by Woman's Missionary Society

The Womens Missionary Society of the First Baptist Church met on Wednesday afternoon with the newly elected president, Mrs. W. W. Weber, presiding.

The ladies were reminded that the society always sends a Thanksgiving Box to the Baptist orphanage at Jackson and clothing was requested for the younger children of the orphanage.

Mrs. M. T. Hill gave the devotion, on "Paul's love for the Jews" reading the scripture from Romans and Second Corinthians.

The theme for the program was "Our Debt To Israel" was discussed by Mrs. John T. Dearing, Miss Sallie Pearson, Mrs. A. H. Gregory and Mrs. R. C. Tomlinson. Each speaker gave their hearers better acquaintances with the Jewish people and a greater appreciation of their worth. Their loyalty and devotion to their church and their feeling of Brotherly love toward their own people, was clearly brought out in the interesting talks. Mrs. T. B. Sellers gave the closing prayer.

Little Miss Margaret Ellis Died Sunday Morning

Mary Margaret Ellis two year old daughter of Frank Ellis and Linda Bourgeois Ellis, died at the Kings Daughters Hospital on Sunday morning at 3:20 o'clock. Her funeral was held on Tuesday afternoon at two o'clock at Logtown with interment in the Logtown cemetery.

Mrs. Otto Scuppe and Mrs. Annie Gale both of New Orleans spent the past week end here with their sisters Mrs. Ella Maybin, Mrs. John Weston and Mrs. Leo W. Seal. There was a family reunion dinner at the home of Mrs. Maybin on Saturday evening and those present besides those mentioned were Mrs. Maybin's house guest Mrs. Jane Carroll of Gulfport and J. Roland Weston.

On Wednesday, Mrs. A. L. Enler attended the luncheon sponsored by the Association of Former Delphians of New Orleans, at which Harriett T. Kane reviewed his new book "Bride of Fortune." After which the regular monthly meeting of the Bas Bleu Book Club was held.

Mrs. J. T. Wolfe and Mrs. Brewster Mollere have issued invitations to a miscellaneous shower complimentary to Miss Marjorie Bourgeois. The shower will be given at the home of Mrs. Mollere, 374 Waveland Beach, on Sunday, October 10, at 3 p. m.

Electrical specialists estimate that one kilowatt-hour of electricity, costing a few cents, will do as much work as a strong man working hard 24 hours.

More than 84 percent of the farms in North Dakota still did not have central station electric service on June 30, 1947.

Daylight-type bulbs are handy for laundry rooms because they make it easier to detect spots and stains.

Coast Electric Power Association Members To Meet October 16th

Splendid Programs Outlined—Congressman William M. Colmer Will Be Principal Speaker—Directors Will Be Elected—Electrical Appliances will be Distributed; Prizes Will Be Awarded By Dealers And By Association

MANAGER

H. HARDIN SHATTUCK

H. Hardin Shattuck, Manager of the Coast Electric Power Association has had much experience with rural electrification. He entered the service of the Rural Electrification Administration in 1941, beginning as field representative. He had a leave of absence for the three years that he served in the United States Navy during World War II, and at the time that he accepted the position as manager of the local Co-ops he was assistant regional head of the management division of the Rural Electrification Administration with headquarters at Jackson, Miss. His territory covered the States of Mississippi, Alabama, Tennessee and Kentucky.

Mr. Shattuck is a native of Kentucky. He came to Yazoo City, Mississippi as a child and received his high school education there. He graduated from Mississippi State in 1932 with a degree in electrical engineering. Following his graduation from State, he was in the appliance business, until he accepted an appointment with REA.

He is married to the former Miss Margaret Holmes of Yazoo City and they have one son Harry H. Jr.

PRESIDENT

CALVIN W. FOUNTAIN

The Coast Electric Power Association was formed and held its first meeting on April 26, 1939. It was a consolidation of the Hancock County Power Association and the Gulf Coast Power Association which was in the process of organization. At that time Mr. Calvin W. Fountain was the president of the Hancock County Power Association, and with the consolidation of the two co-ops "Doc" Fountain was named President of the newly formed association and has served in this capacity since.

"Doc" lives at Logtown, where he operates his Drug Store and grocery business.

He has lived REA for the past ten years and has given his time and energy to the development of the Coast Electric Power Association, and his smile broadens when reports show the Coast Electric Power Association among the top Co-ops of the nation.

Musical Aptitude Test Given Students At Bay High School

Alonzo Elison, musical director of the Grunewald School of Music and Fred Hess, representative of Grunewald Company of New Orleans, gave a music aptitude test to the pupils of Bay High School on Wednesday morning. Results of the test will be released in a week.

Father of Mother Marie Blanche Dies In New Orleans

Mother Marie Blanche, Superior of St. Joseph Academy, was called to New Orleans on Thursday morning of this week because of the sudden death of her father, Mr. Domingo Brislara, of 2223 Ursuline Avenue, New Orleans, at 6:10 A. M.

Surviving Mr. Brislara are his wife, Marie Blanche Reine; sons Manuel B. and Dominick Brislara, of New Orleans; daughters, Mrs. George W. Wiltz, of New Orleans; brothers, Charles E. Brislara, of Chicago, Ill.; and Arthur J. Brislara, of Bunkie, La.; 13 grandchildren and one great grand child.

Funeral services were held this morning from the funeral home of Jacob Schoen and Son, New Orleans, with requiem Mass at St. Ann's Church.

JOSEPH LADNER AND MISS BONNIE BUCKLEY MARRIED SUNDAY AFTERNOON AT RECTORY

Miss Bonnie Buckley, daughter of Mr. and Mrs. Wm. F. Buckley of Taylorsville and Mr. Joseph Ladner, son of Mr. and Mrs. Ed. Ladner of Ansley were married on Sunday, October 3 at 4 p. m. in the Rectory of Our Lady of the Gulf Catholic Church; Rev. Father Clement of Pearlport performing the marriage ceremony.

The bride wore an afternoon dress of brown crepe with brown accessories, and a corsage of pale yellow tube roses. The bride had as her only attendant Miss Ethel Ladner, sister of the bridegroom who wore a dress of light green wool worn with brown accessories and a corsage of yellow tube roses. Mr. Ladner had as his best man his uncle Herbert Zengarling.

A reception was held at the home of the bridegroom's aunt Mrs. Carl Heitzmann. The bride's table, was covered with a white lace cloth and centering it was a three tiered wedding cake with a miniature bride and groom, and extending from the base to the cake to the four corners of the table were narrow pink streamers ending at each corner with a tiny bouquet of pink blooms. After a wedding trip to Florida, the couple will make their home in Gulfport where the couple hold positions at the Veterans Hospital.

IN A REMINISCENT MOOD

Ten years is a short span of time, nevertheless as we look back and see the many accomplishments that have taken place since the advent of electrical power in the rural areas of Hancock County, we set and wonder how so much could come from so little in such a short span of time. As our thoughts ramble through the realms of this gigantic power association we are forced into a reminiscent mood.

Well do we remember the first meeting held for the organization of the Hancock County Power Association. The editor, whose membership in the co-op dates back to that time and who was in attendance at this meeting, feels that it is quite an honor to be able to say that he placed in nomination the names of the five original directors, four of whom are yet serving: Calvin W. Fountain, John S. Rester, Isaac M. Frierson and James L. Crump. The fifth member, John FASTERLING later moved to Louisiana and resigned.

In the early days of the organization of the Hancock County Power Association the linings in the clouds were dark and heavy. It appeared for a while that there was not a chance of securing a sufficient number of subscribers to begin operation.

The Rural Electrification Administration would send a representative for short visit and he would give his views and then another would come with opposite views, leaving all in a quandary; with all of this the road appeared dreary and desolate.

A call went through to Washington from the writer to our beloved friend the late Senator Pat Harrison and to Congressman Bill Colmer with an SOS, that unless we had some help in organization from the administration we were sunk.

Within two hours of the time the conversation ended with our able representatives we were advised that Harold Clark and James Cobb of the Rural Electrification Administration office in Washington would be on their way to Bay St. Louis to remain until the organization of the Hancock County Electric Power Association was completed.

These capable and affable young men set out with the officers of the association to visit the homes of the prospective subscribers on the proposed 87 miles of lines to be erected, and at the conclusion of their work they still lacked the number of subscribers required. They recommended to their superiors, that this requisite be by-passed and that the Hancock County Power Association be allowed to proceed as the prospects were good, and that as soon as electric power would reach the area the number of subscribers would far exceed the quota. This request was granted. They were not mistaken in their judgment, as the results of the growth of the Hancock County Power Association and the Coast Electric Power Association bear this out.

Many people were of the opinion that electrical power would never reach the rural areas; it was merely a dream; however it is now a dream come true.

The past ten years have gone by as flying time does, and has brought many comforts to the membership of the Coast Electric Power Association. The next ten years will probably exceed

MRS. EDRIS STECHMANN

Mrs. Edris Stechmann, the affable and pleasant mannered Cashier and Receptionist of the Coast Electric Power Association, is a native of Bay St. Louis; a granddaughter of James W. Vairin, who served as Sheriff of Hancock County. She is a graduate of Bay High School Class 1930 and for 15 years Mrs. Stechmann served as Deputy Clerk of Courts of Hancock County.

Mrs. Stechmann has three children, Teddy, Jr., Richard and William.

ORTTE THEATRE SUNDAY - MONDAY "THE BEST YEARS OF OUR LIVES"

Starring Fredric March,
Myrna Loy, Dana Andrews

Samuel Goldwyn's "The Best Years of Our Lives," still adding to its already-impressive array of honors returns to the screen of the Ortte Theatre for its regular engagement, Sunday and Monday.

To make a clean sweep of nine Academy Awards, as in the case of RKO Radios release in 1947, ordinarily would have climaxed the history of a successful film and closed the records as far as movie-goers or the industry were concerned. No picture, before or since, was ever so honored by the creative forces of Hollywood.

But for the Goldwyn production the deluge of awards merely marked the pinnacle of one set of records and launched another.

Prior to the Academy Awards, the picture had won the New York Film Critics' Award for the best

picture of the year and went on to garner the Newspaper Guild Front Page honor for the finest film of the season. The Hollywood Foreign Correspondents, the New York Foreign Language Film Critics Circle, Parents' Magazine, Redbook and Look had added their plaudits for the picture, its stars and the men responsible for its production.

Following the historic Academy sessions, the list of tributes grew in impressiveness. A poll of more than 400 of the nation's film critics reviewers and commentators by the trade paper, Film Daily, named "The Best Years of Our Lives," the best picture released in 1947. Willa Wyler duplicated his Academy triumph in the directorial class while Fredric March did the same for his acting. Robert E. Sherwood was honored again for his script and Harold Russell for his performance. Typical of the organizations honoring the film were the National Board of Review and the General Federation of Women's Clubs which placed it in the "best" category.

U. S. Farmers use electricity in more than 350 different ways.

the progress that has been made since its organization. We hope they will prepare to take advantage of every opportunity that may be within their reach to expand their lines so that every person within the area they serve may have the same opportunity to have comforts that are now being enjoyed by many showing that true neighborly feeling and unselfish spirit; when this has been done we too shall rejoice and always carry happy thoughts of the small part that we played in bringing the comforts and pleasures that electrical power means to you.

JAMES FORNEA

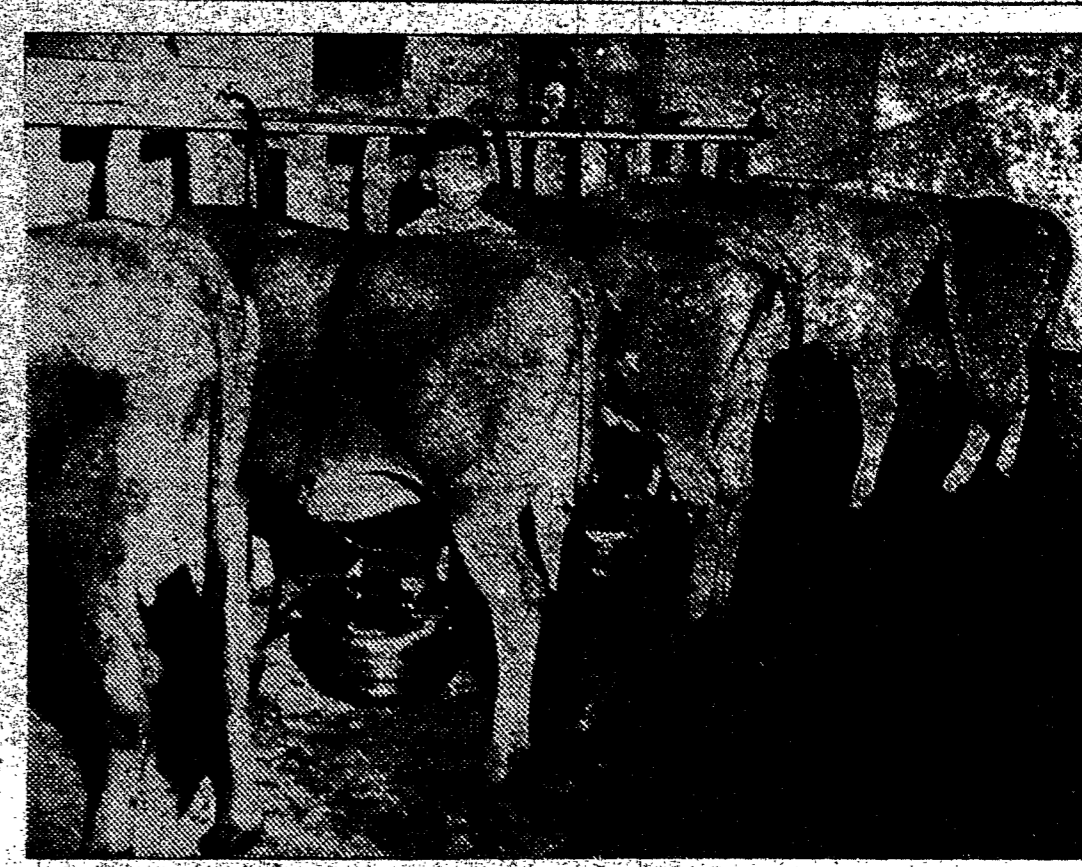

James Fornea is maintenance man for the Coast Electric Power Association on all lines feeding out of the Derby Metering Point. He is a native of Picayune, Miss., and was in the Army Airforce during the war. He accepted employment with Co-op as a linemen's helper when he was discharged from the service in February, 1946. In December 1947 he was placed in charge of light construction and in May 1948 he was assigned as linemen.

ISAAC M. FRIERSON

Isaac M. Frierson is one of the original five directors of the Hancock County Power Association, and when the Harrison County and Hancock County Units were consolidated into the Coast Electric Power Association, Mr. Frierson became a director of the new Co-op. He was elected to the position of Secretary-Treasurer on April 26, 1939, and retains that position to this time.

He was born at Aaron Academy in Hancock County and he and Mrs. Frierson live on the old homestead at the present time.

When Tony Scatide went out to Anthony J. Morreale's dairy to make a picture of his barn during milking time, Anthony bemoaned the fact that he was sick and was unable to get out to do the milking and have his picture taken. The results were that due to his father's illness little Jackie Morreale, 10 years of age had to take care of the chores attached to a dairy farm. There are twenty-one cows in the Morreale Dairy herd, and of course under the old method of hand milking this would have proved a quite burdensome and nearly an impossible task for a ten year old boy. With milking machines and Coast Electric Power Service the youngster was able to do the work of a man and in a whole lot shorter time than it would have taken in the old way.

Jackie is a student at St. Stanislaus, and each day he assists his father around the dairy. The cows are allowed to range in the open spaces surrounding the home on Highway 90, and each day Jackie herds them on a bicycle.

Mr. Morreale actually did the Power Association a favor when he became sick on the day the photographer came to take the picture, for through his son they are able to tell a story of the benefits of rural electrification.

May we add that from personal knowledge the editor knows of many more youngsters throughout Hancock County who with the aid of electric milking machines are today helping to operate dairies.

RAYMOND SCHINDLER

Raymond Schindler began working for the Coast Electric Power Association as an assistant to the Bookkeeper and stockroom clerk in August 1947. He left his employment with W. A. McDonald & Sons to accept this position.

He has recently completed the REA accounting course and is awaiting the results of his final examinations. He is a native of Bay St. Louis and is a graduate of Bay High School.

Coast Electric Power Ass'n

Welcomes its Entire Membership and the General Public of South Mississippi to Bay St. Louis, October 15, (Friday Evening) and October 16, (Saturday all day)

to attend the

MEMBERS MEETING AND ELECTRICAL APPLIANCE AND EQUIPMENT EXHIBITION

To Our Members:

This Members Meeting is YOUR MEETING in every sense of the phrase, and every Member is urged to be present to take part in the program and activities of your cooperative. Reports on the progress and affairs of your business will be given by the officers and Manager.

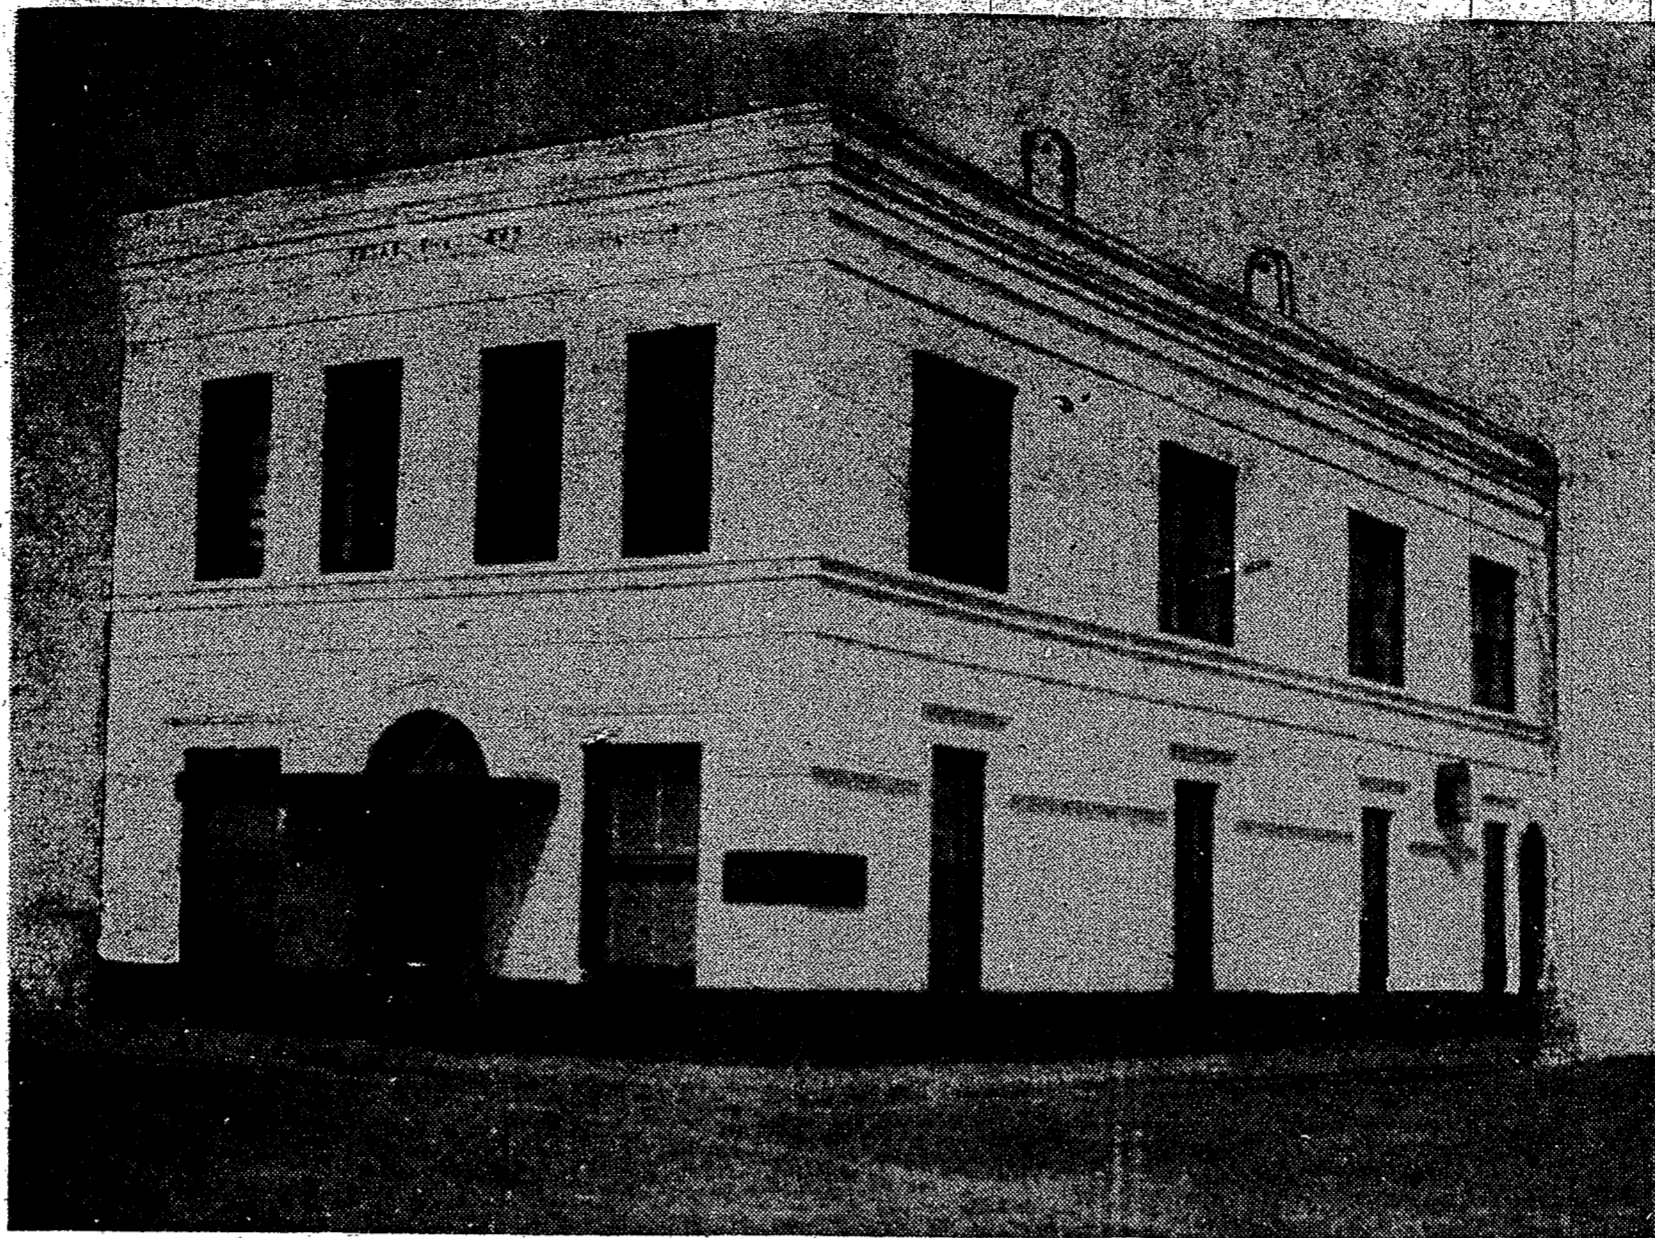

Members of the Board of Directors to serve for the next year will be elected by YOU at the business session.

Other questions of importance will be presented to you for your decision. The success of our cooperative enterprise will be determined over the years to a large extent by the interest the Members take in the business. We earnestly urge you to attend this Members meeting.

Dealers in electrical appliances and equipment will have large and attractive displays of the latest electrically powered appliances and machinery for your examination.

ABOUT WOMEN

In 1776 our fighting forebears set up a new form of government on this continent. No longer the subjects of a king, we became citizens of a Republic, with the promise of life, liberty and the pursuit of happiness.

The Declaration of Independence and the Constitution guaranteed certain inalienable rights to us and our children. The freedom of the press, of speech, of public worship and of petition were secured in a covenant known as the Bill of Rights.

The American woman became the larger beneficiary under this amazing experiment. Out of an inspiring democratic idea the American woman gained and enjoyed more freedom than woman had ever known before. Step by step restrictive laws were replaced to give her equal property rights. The Constitution of the United States was amended to give her equal suffrage.

Because of the spirit of 1776 the inventive genius of men was released to work miracles in science and industry. The steam engine, telephone, automobile, airplane and radio conquered time and space.

One hundred years ago our grandmothers carded, spun, wove and stitched. Men impelled by individual initiative, with the hope of personal reward built factories to do the same work cheaper and better and went into the dressmaking business. Men baked, cooked, canned and preserved. They constructed laundries and did the family wash. Edison, one of our greatest exponents of free enterprise, invented the incandescent electric light and woman no longer filled lamps and cleaned chimneys. Streams were harnessed, power plants built, electricity was employed—ranges replaced cooking stoves. Electric vacuum cleaners, water heaters, irons, automatic refrigerators and washing machines converted millions of homes into houses of magic.

Legislative enactments and constitutional amendments contributed much of woman's emancipation but privately owned, independent business contributed equally as much. The American ideal gave her equal rights: American industry gave her equal opportunities. So men and women formed a partnership and, working together, produced what we have come to call our American Way of Life. It may have many imperfections but there is no better social, political or economic system on the face of the earth. It raised here the highest known standards of living and under it the American woman became the envy of women the world over.

MORE PEOPLE DRIVE CHEVROLETS THAN ANY OTHER MAKE!

BECAUSE CHEVROLET GIVES IT'S OWNERS THE MOST VALUE IN APPEARANCE, DEPENDABILITY AND SERVICE

In all parts of America—year after year the story is the same: More people are buying more and more Chevrolets than any other make just as they have been doing for the past 17 year period. It's always the **BIG QUALITY CAR AT THE LOWEST PRICE**—the most for your money.

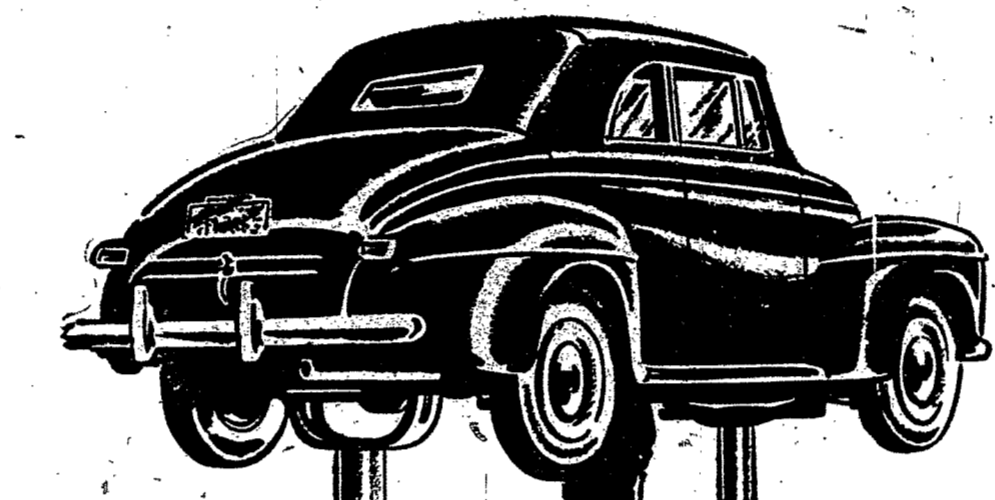

Here too—you will find fast dependable Chevrolet service. The largest part stock in Hancock County. Factory trained man power with the Chevrolet know how. You will also find the latest up-to-date tools and machinery. No long delays here. Please note the master precision machinery shown on this page. All of which and more you will find in our modern service department.

You are invited to inspect the Hancock County Chevrolet Home thoroughly.

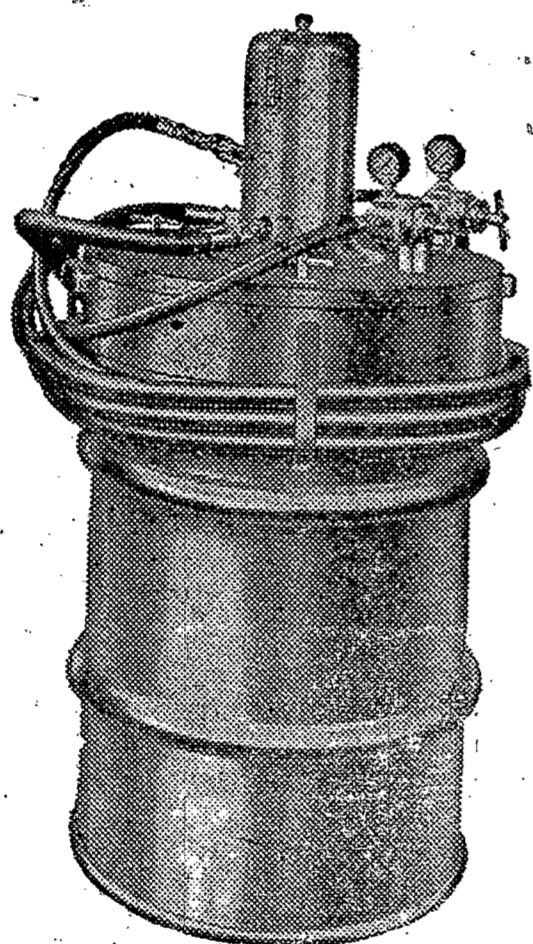

SUN MOTOR ANALYZER

This machine is the "MAGIC EYE" of all motor inspection. It takes all the guess work and delayed experiments out of motor work. Your motor is analyzed on this machine and the trouble is immediately located permitting us to correct it. A big saving because no parts are replaced that are not needed. Bring your car in for a motor analysis—it may save you many dollars in gas economy.

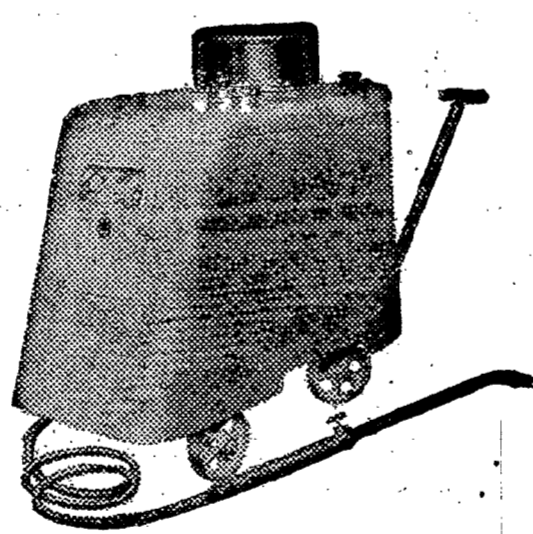

When your car or truck is on this elevated twin post hoist you may walk under it freely and examine it thoroughly and know that everything is in good order. You may watch under car repairs being made, etc. This twin post hoist is used for perfect undercoating jobs. Every under-car metal part requiring undercoating is reached. To save your car on this salt water and rusting metal Gulf Coast have your car or truck steam cleaned and undercoated. Watch this work being done here.

GRACO UNDERCOATING UNIT

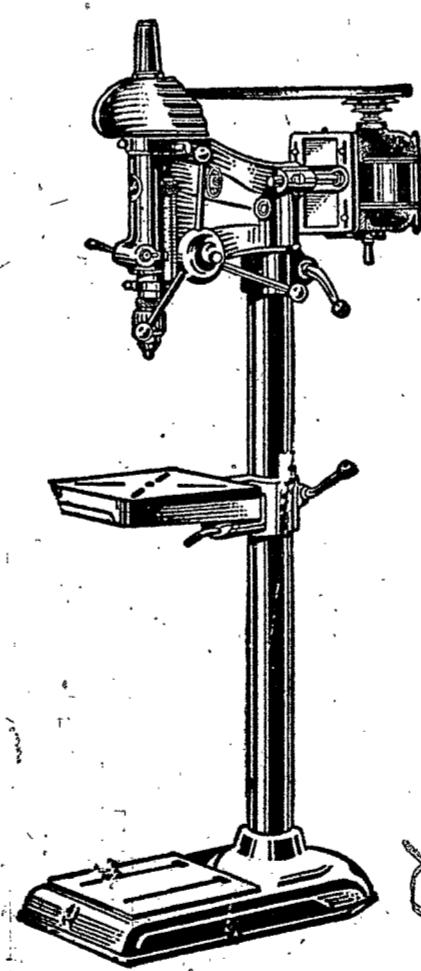

new type powerful pump unit sprays underseal thoroughly under high pressure to all sheet metal under car surfaces including engine hood. A rubber like permanent coating that lasts indefinitely. Seals up all cracks between jointing metal parts and eliminates body noises and annoying rattles. When undercoated your car becomes quiet and feels like a new car. Come in and see some of these under coat operations in our shop.

HYDRO-PRESSURE

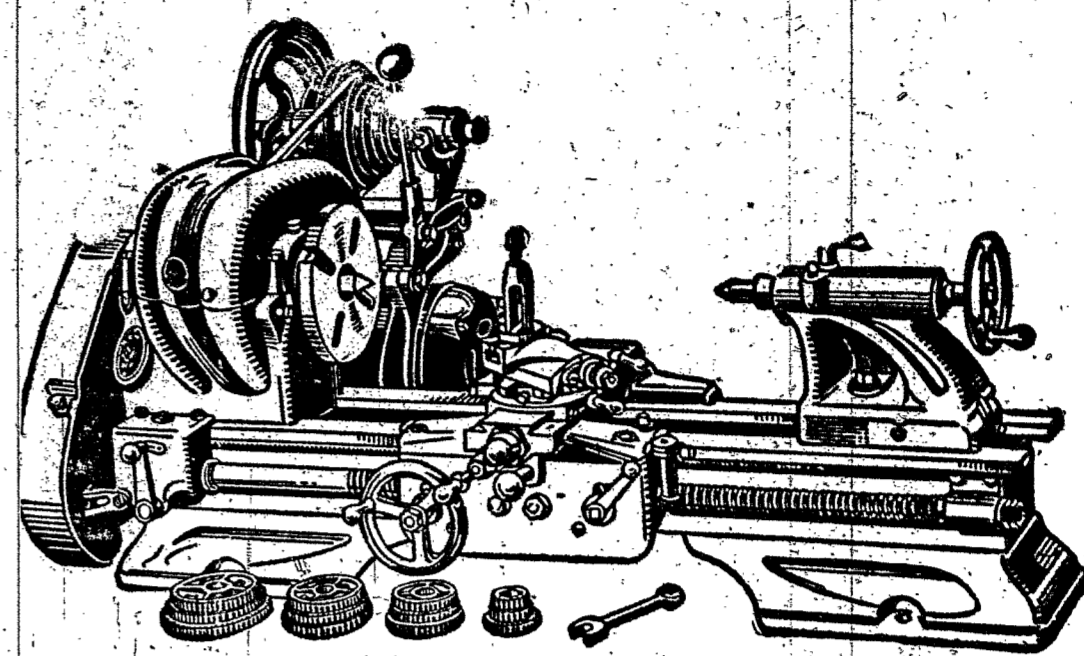

JENNY STEAM CLEANER

Automatic high pressure cleaner removes all road dirt mud, oil, grease and coast salt water deposits on under metal. Indispensable for making cars and truck ready for under coating. Cleans motors like new.

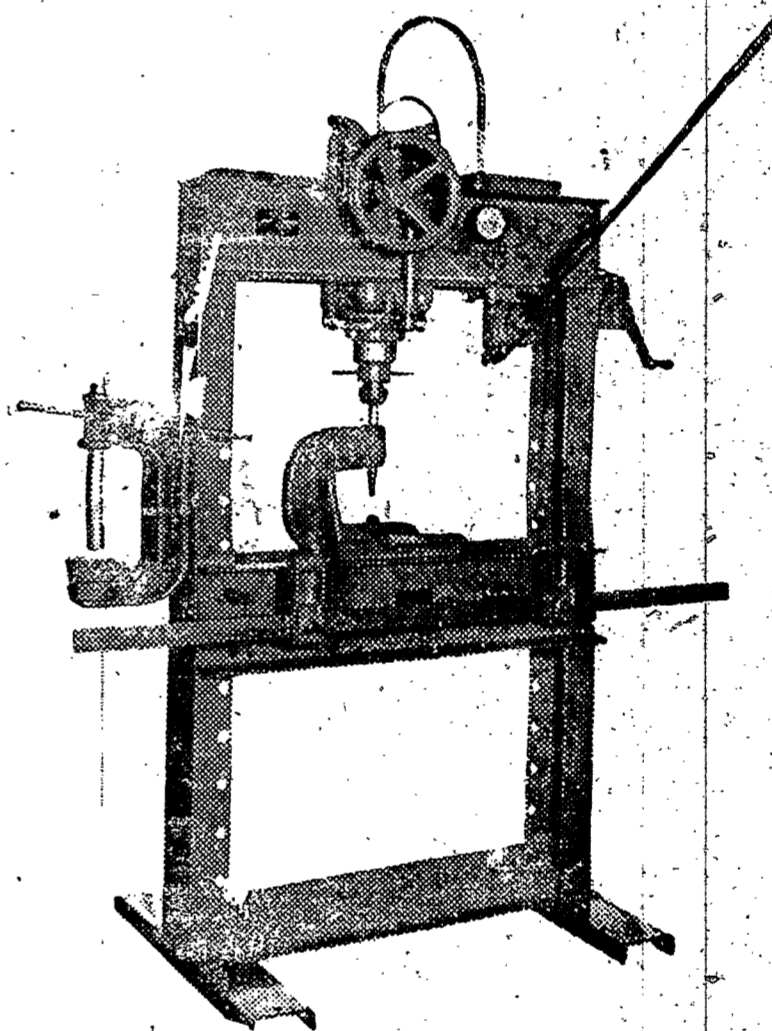

ATLAS DRILL PRESS

For accurate fast drilling. Saves time and money. A most vital multi-purpose tool in our shop.

SPECIAL ATLAS SHOP LATHE

For quick service on many operations where parts must be turned down, special bushings made, etc. and other work quickly done to get your car or truck running.

HYDRAULIC POWER PRESS

60 to 100 tons. High and low pressure. Movable fast operating ram. This piece of heavy shop equipment is indispensable for heavy pressing on gears, axles, hubs, and many other heavy duty operations.

MISS ALBERTA BEYER

Miss Alberta Beyer, bill clerk for the Coast Electric Power Association was employed as clerical worker in the office in 1946, and has been in her present position since March, 1946. Miss Beyer is a native of Bay St. Louis and a graduate of St. Joseph Academy. She was previously employed as a bookkeeper for the Cue Oil Company of Bay St. Louis.

MRS. GLADYS CHAPMAN

Mrs. Gladys Chapman has been in the employ of the Coast Electric Power Association since March 1942. She began as a general office clerk and at this time, her duties are multiple, and is classed as utility clerk. She fits into nearly every position in the office. Mrs. Chapman is the former Miss Gladys Weston of Logtown.

Waveland News

Waveland is very proud of having six boys playing on St. Stanislaus football team. The boys are Walter Turcotte, Levy and Charles Ladner, Jimmy Landry, L. J. Uhle and Bud-dy Cravetto.

We are glad to report that Mr. Ed Ruhr is getting along nicely and expects to be home soon.

Mrs. Roger Bordages spent Monday in New Orleans.

Capt. C. M. Torgerson flew from New York to Marseille, France via Paris on a business trip.

Mr. and Mrs. T. P. Hickey and family spent the week end at their cottage on South and Pine Sts..

Mr. and Mrs. Guy Keefe have purchased a house on Market Street.

Mr. Harold E. Moore has purchased the home of Mrs. Mattie Smith in Waveland Park.

Mr. and Mrs. J. Kramer of Jennings, La. spent a week at their cottage here. Dr. Kramer spent his time fishing and was well pleased with his catch. He said he would return to Louisiana and show his friends what he caught on the Mississippi Gulf Coast.

The many friends of Mr. P. B. Berkes are glad to know that he has returned from the hospital and is doing nicely.

Let's all sing Happy Birthday to Little Miss Aggie Bourgeois, daughter of Mr. and Mrs. Sidney Bourgeois, who celebrated her second birthday on Sunday. Mr. and Mrs. Jake Schwander and family came over from New Orleans for the occasion.

Ott Brockman, after spending two weeks in the Baptist Hospital is home again convalescing from an operation. Ott would be glad to see his many friends.

Mrs. Bessie Todd-Vetters of Moss Point visited Mrs. Roger Bordages and Mr. Sidney Carrio on Thursday.

Mr. and Mrs. Bob Angelle visited their parents Mr. and Mrs. Henry J. Angelle over the week end.

Mrs. A. B. Favre, Jr., Mrs. Louis Collier and Mrs. W. E. Tucker motored to New Orleans on Monday.

Miss Rosemary Holderith spent the week end in New Orleans.

Fuses are safety valves for your electric system. Never replace a blown out fuse by a coin or a wrong size fuse.

The Work And Importance Of Your County Health Unit

By WAYNE ALLISTON
(Milk Inspector, County Health Department)

In 1942, the dairy industry in Hancock County was in its infancy. There were approximately forty dairies in production, with barely half of them being served by the R. E. A. By the middle of 1943, such items as transformers, wire and meters were almost non-existent as far as civilian use was concerned. The war effort was getting in full swing.

Dairies were being built in Hancock County to help supply the coastal milk shortage. The REA was frantically trying to service these new dairy farms, but shortages became worse and new barns were being built daily. The REA lost ground in its fight to keep up, and in the fall of 1946, fifty three of the one hundred and thirty five dairy farms were without electricity.

Due to the extreme shortage of milk on the Mississippi Gulf Coast, public health authorities had to overlook many violations of the sanitary code and were forced to use makeshift appliances in many instances. Absence of electricity was to blame for many of the violations. Many dairies were started in locations where REA service was unavailable, and a frightening percentage of these closed in a few months because the milk produced could not meet the minimum standards of quality.

Most people understand the watchful eye that public health officials keep on the milk industry. Any dairyman, whose milk barn does not meet the necessary physical requirements and whose milk falls below the standard in bacterial content, is immediately degraded by the health department and his milk is an unsalable product. Electricity has minimized his chances of not being able to meet his requirements.

As of October 1, 1948, there are one hundred and fifty three dairies selling approximately four thousand gallons of Grade A milk daily. This phenomenal rise can largely be attributed to the miles of REA lines that cover Hancock County. New dairies are being constructed daily, and all dairy farms now in operation are served with electricity.

Electricity means many things to a dairy farmer. Labor costs are cut to practically nothing, bacterial standards are easily met, physical requirements for the milk barn such as instant cooling and running hot and cold water do not entail hours of back breaking toil, and the percentage of rise in the standard of

living cannot be evaluated in any terms.

The milking machine, operated by an REA served electric motor, has greatly reduced the dairyman's need for labor. One man is able to do the work of four men with the automatic milker, and the quality of the milk from a machine is estimated to be fifty percent above that produced by hand milking.

The electricity operated milk cooler will bring the temperature of ten gallons of milk from 90 degrees F to 50 degrees F in one hour. The scall electric automatic dairy hot water heater furnishes plenty of hot water for cleaning purposes at an average cost of less than one dollar per month. These two electrically operated appliances will turn a milk of good quality into one of first grade quality, and Hancock County produced milk is in demand from many sources.

Dairy farmers are no longer quitting business, but due to the REA and its network new barns are dotting the country side.

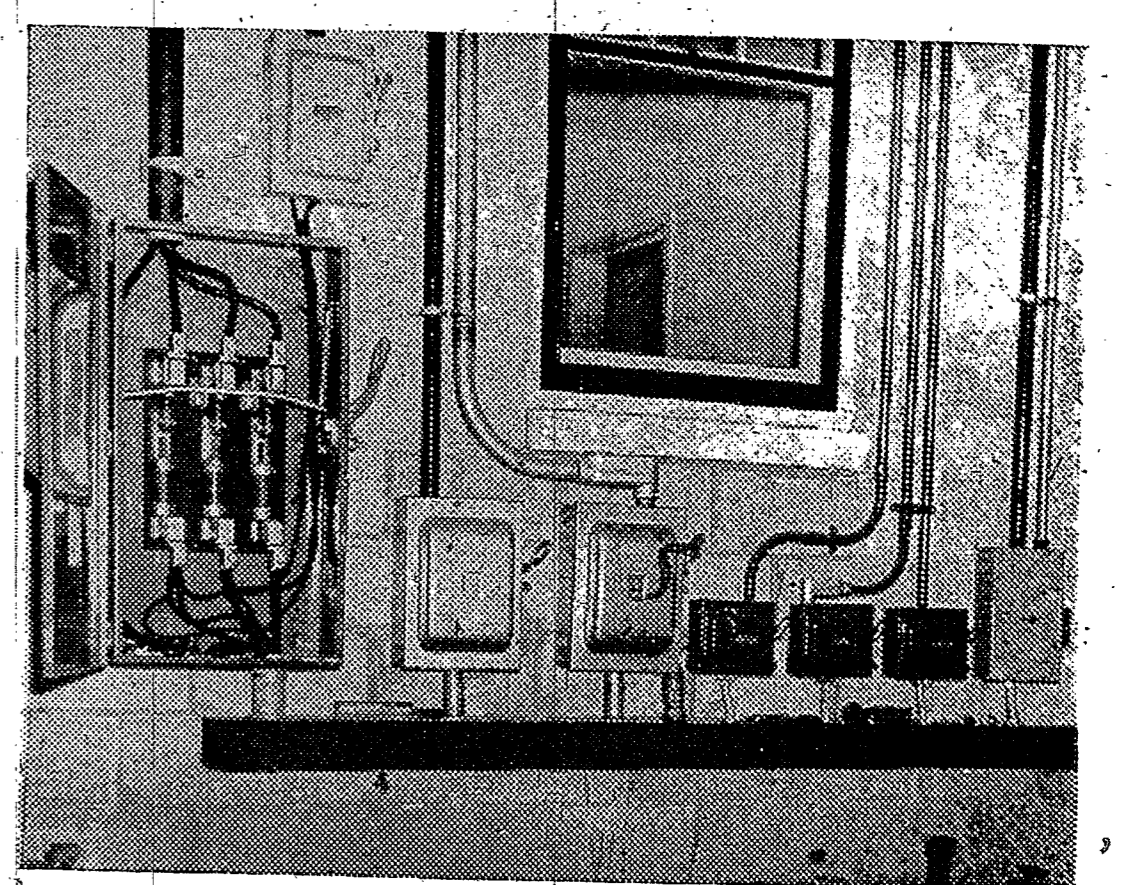

Wayne Alliston, Hancock County Milk Inspector, and Dairyman McCoy Shaw are talking over the finer points of the electric operated milking machine.

BOARD OF DIRECTORS

The present Board of Directors, with their attorney and former manager of the association are pictured above. Reading from left to right: front row are: E. J. Morris, C. C. Ferrell, former manager; C. W. Fountain, President; John Rester, George Pearson, Isaac Frierson, Secretary. Back row: Ernest Clark, Aden Bellew, A. S. Carter, Harvey Burks, Willie Pearson, Randall Rester, Fred Ladner, Robert L. Genin, Attorney for the association; B. F. Morris, James L. Crump and Weldon E. Shaw.

—Mr. and Mrs. Charles Collins of New Orleans spent a few days here last week at their home in Cedar Point.

—Miss Nora Collins of New Orleans spent Saturday and Sunday here as the guests of Misses Alice and Elsie Spurl.

—Mrs. Alice Buckley spent the past week end here as the guest of Mrs. W. A. McDonald. Mrs. Buckley visited other friends while here.

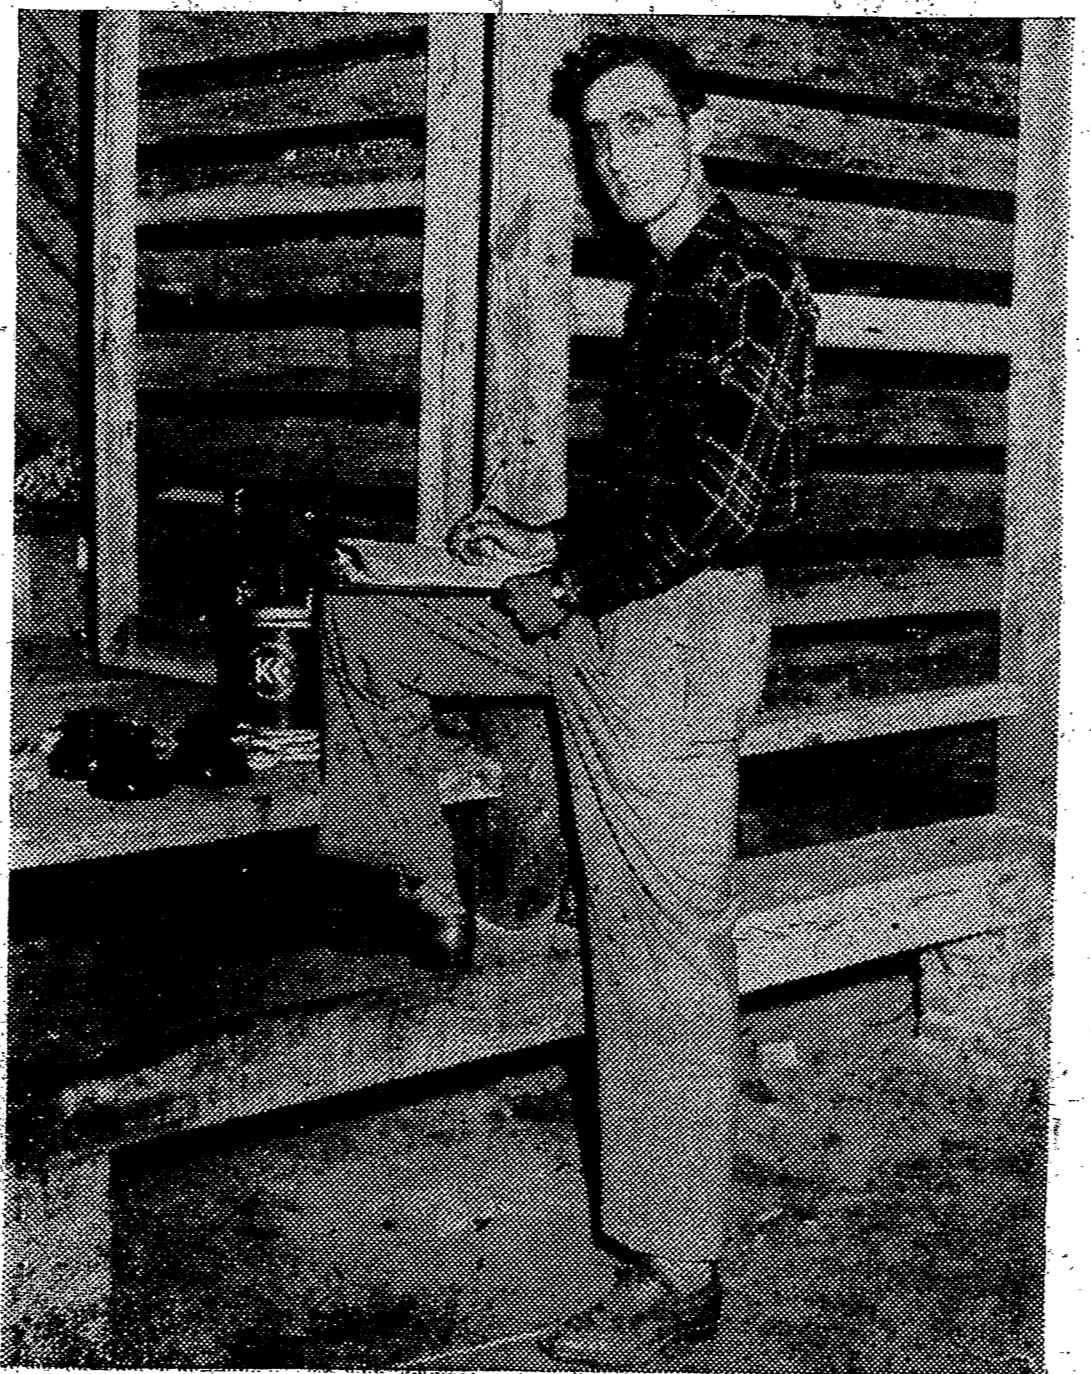

—Richard Berne of Covington, Virginia, spent a week here with his uncle C. B. Penrose, Sr., and Mrs. Penrose, at their home in Waveland.

MISS MARY FRANCES SCAIFE

Miss Mary Frances Scaife has had charge of the posting and adjusting in the office of the Coast Electric Power Association since January 1947. She was formerly general office clerk and had held that position from July 1946, when she began working in the Co-op office.

She is the daughter of Mr. and Mrs. Arthur Scaife of Bay St. Louis, a graduate of St. Joseph Academy and of Gulfport College. Before entering Gulfport College she had attended Louisiana State University for one year.

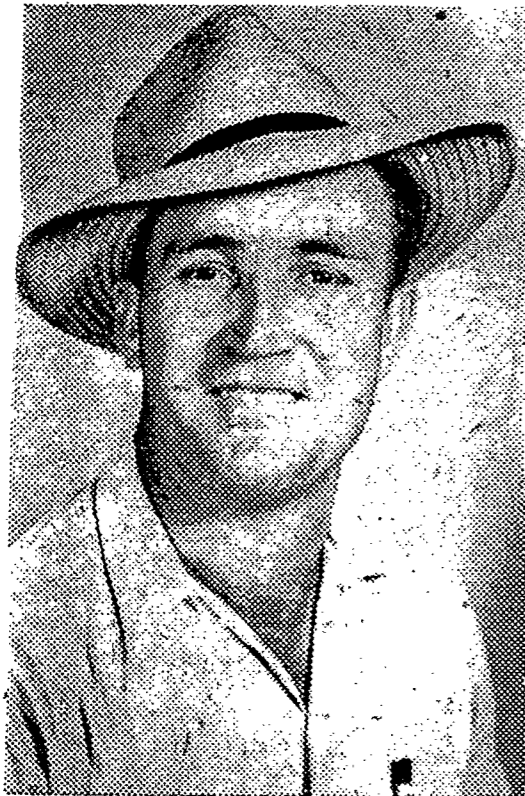

JAMES ANSLEY

James Ansley is the material and work order clerk for the Coast Electric Power Association. He started working for the Co-op in May 1948 as an assistant to the construction engineer on "R" Section.

James is a native of Bay St. Louis, a graduate of Bay High School, and attended Mississippi State for three years in the school of engineering.

He served three years in the airforce during the World War, and was overseas in the European Theatre of operations for more than 18 months.

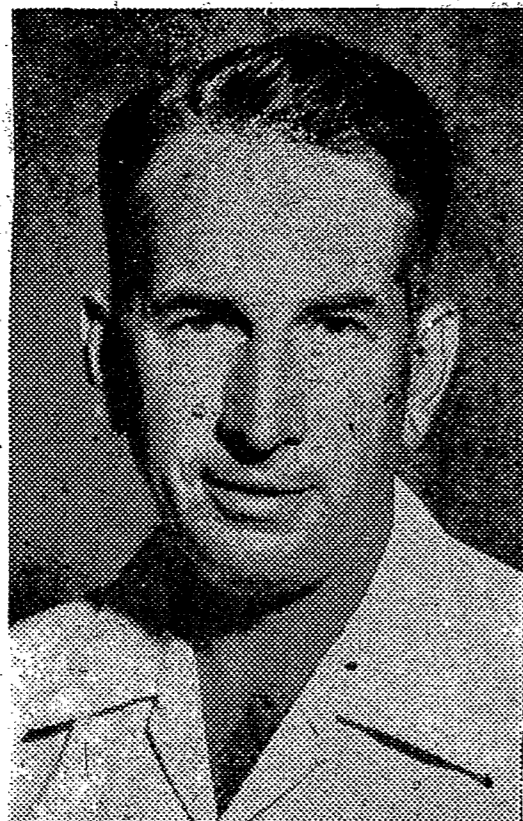

ARTHUR MILLER

Arthur Miller began working on REA construction with J. R. Rollins, construction engineer, and was employed by the Coast Electric Company in 1941 as a lineman's helper under J. T. Williams. He worked with Mr. Williams for 11 months and then with Frank White for a period of 5 months and when Mr. White resigned to take a job in Oklahoma, he was assigned the lineman's job.

At the present time he is maintenance man for a part of Hancock County and 45 miles of line in Harrison County.

Arthur is married to the former Miss Hazel Bourgeois and they have three children.

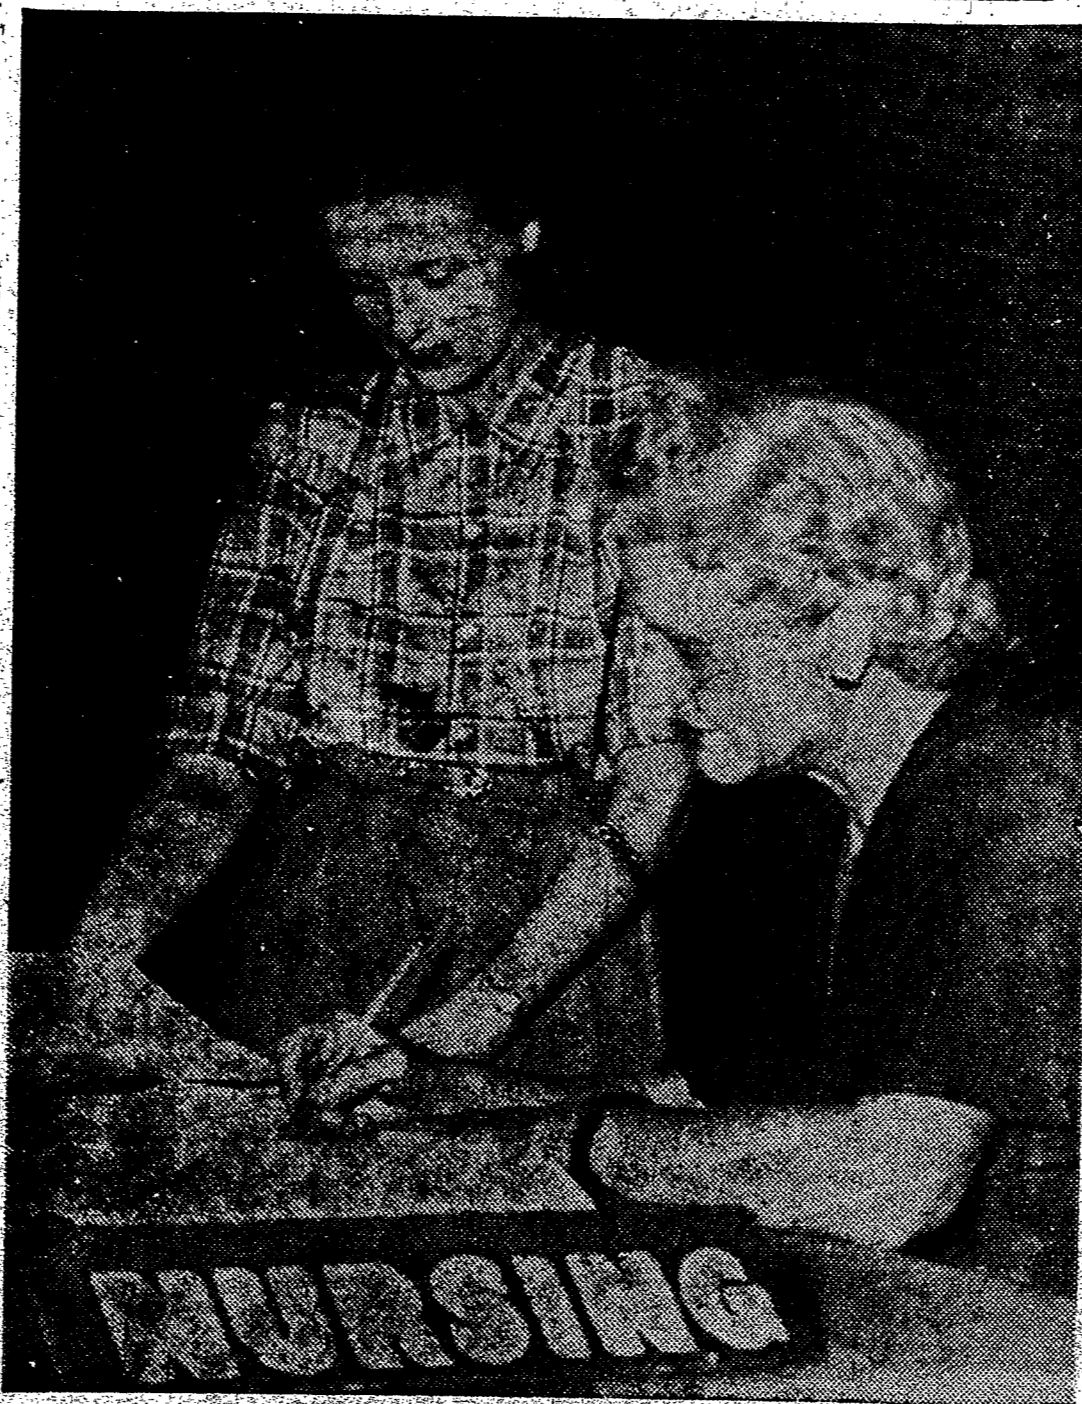

J. WILLIAM WATTS

J. William Watts, Jr., who is operations Superintendent for the Coast Electric Power Association started working for the Co-op in April 1945 as Assistant to the Manager.

He is a native of Bay St. Louis and a graduate of Bay High School. He is married to the former Miss Virginia Chapman and they have three sons.

Prior to his employment with REA, Bill was superintendent of Maintenance for the Chapman Air Service in New Orleans, who were engaged in training students for naval aviation.

University Miss. Oct. 5—Petite

18-year-old May Ford of Bay St. Louis who fooled all her friends last summer when she decided to work in a hospital, is the first student to sign up for the new training course for nurses at the University of Mississippi.

Daughter of Mr. and Mrs. Leo G. Ford of Bay St. Louis, she finished the high school course at St. Joseph's Academy last May and decided to work for the summer because her mother was a member of the board of the King's Daughters and Sons Emergency Hospital, Miss Ford picked a job as nurses aid although "everybody knew I wouldn't stay in hospitals and similar institutions."

Enrolled as a freshman in the Department of Nursing, Miss Ford will take the four and one-half year course, leading to the Bachelor of Science degree and a Diploma in Nursing. She will take liberal arts subjects for her first two years at the university, the remainder of the course deals with clinical practice in hospitals and similar institutions.

Mr. and Mrs. Ben Casanas have closed their Waveland home and to Natchez, Mississippi. Mrs. Casanas' parents Mr. and Mrs. F. J. Nelson, The Whites have recently purchased a home in Metairie, Louisiana.

Mr. and Mrs. Charles H. White spent the past week end here with Mrs. White's parents Mr. and Mrs. F. J. Nelson. The Whites have recently purchased a home in Metairie, Louisiana.

Phone 1167-J

JAMES L. CRUMP

One of the prime movers in the bringing of electrical power to the rural sections of Hancock County was James Lyman Crump, who was named as one of the original directors of the Hancock County Power Association. Mr. Crump served on

this board and when the co-ops consolidated, he was named to the Board of Coast Electric Power Association and has served continuously.

Mr. Crump is a retired cotton broker and has large oil holdings. He came to live in Hancock County a number of years ago, and his home "Holly Bluff on the Jordan" is one of the show places in South Mississippi.

Mr. Crump is retiring from the Board this year. He feels that he saved his time. He wants to be able to devote more of his time to the development of farm interest and pastures, and the raising of his purebred Braford Cattle.

Jim Crump has been an asset to the Co-op and has been an indefatigable worker in its behalf.

—Mrs. Roy Cagle of Montgomery, Ala., is spending a few days here with her son-in-law and daughter Mr. and Mrs. R. L. Hamilton and children.

—Mrs. Elizabeth Boudin who has been a patient at Hotel Dieu for several weeks was brought to her home here on Monday and is reported to be much better.

—Mr. and Mrs. Gaston Duréau of New Orleans, were guests here of Mr. and Mrs. N. L. Carter. The Carters and their guests attended the Vanderbilt-Alabama game at the Ladd Memorial stadium in Mobile on Saturday.

—Mrs. Elmer Boyd spent last week end here with her mother Mrs. Carmelita Saucier and family. Mrs. Boyd has returned to Jackson where she has accepted a position while Corporal Boyd is overseas. He is with the U. S. Army and has recently been returned to overseas duty.

—Mr. and Mrs. N. L. Carter left Wednesday for a trip to New York and the New England coast. The Carters are making the trip by auto and are anticipating an enjoyable one in the season when the scenery is at its best. They will be gone about three weeks.

—Mr. and Mrs. Leroy Nelson have sold their home in Fort Worth, Texas, and are again making Bay St. Louis their home. Mrs. Nelson is with her father Mr. George Seuzeneau, in his home in Keller Avenue and Mr. Nelson who is with the California Oil Company in New Orleans commutes.

YOUR MANAGER REPORTS

On October 15th, the day before the members meeting, I will have been your manager for exactly 3 months. This has been a busy 90 days. We've installed automatic voltage regulation at Derby and Picayune, as well as a booster regulator at Woolmarket. We've rearranged our office in an effort to provide better facilities to handle your business—we've secured a warehouse, consolidated our material into it and employed a stores clerk to set up and maintain perpetual inventory on the hundreds of items of

material it takes to build and maintain lines. We've managed to secure enough material to enable us to proceed with our construction program. Your manager recently made a trip to Washington to request immediate consideration of plans and specifications for building 124 miles of line. I am happy to report to you that the REA, cooperating 100%, did review these plans and have just given us the O. K. on them. Our engineers have notified 66 contracting firms of the pending construction and the Board, at a special

CECIL BELTON

Cecil Belton, who is line-man helper to J. D. Williams, started working for the Coast Electric Power Association on July 1, 1947. He attended school in Orange Grove, Miss., and enlisted in the United States Navy on April 19, 1944 and was discharged on July 19, 1946. On August 19, 1946 he married the former Miss Mary Maiden, and they have one child, Mary Anna.

meeting on October 14th, will open the sealed bids on the work. We will be able to announce the successful low bidder to you at the meeting on the 16th.

After the bids are reviewed, the contract is forwarded to the REA in Washington for their review and approval, providing it is satisfactory. This will take up to 45 days—then our engineer notifies the contractor to begin work—this must be done in 10 days, so if everything goes as now planned, we will get started about December 10th. I realize that this information is not of great interest to you members already receiving service, but most of those eagerly awaiting electric service are kin folks—neighbors, friends of yours, so we want to get the word to one and all that we here at headquarters are doing our best to reach that goal we have set—to make possible electric service at cost of every one in the area we serve. We will not stop until that goal is reached.

You will have received the official notice of the meeting by the time you read this. You will see in this notice a list of the members nominated by the nominating committee—officers will probably be nominated at the meeting. Let me again point out that the election of

your Directors is important to each and everyone of you. The members elected will be charged with the responsibility of determining policies for an organization now approaching the \$2,000,000 mark. The Directors must be men of proven worth, men of vision, men capable of working together—if your Co-op is to continue on its march to the fulfillment of its pledge I have just stated—Electricity for all—at cost. Your duty as a member is to attend this meeting and vote for the good directors in order to protect your interest in your Co-op.

Two manufacturers of radio communication are making studies of our needs and will soon furnish us studies and reports on their findings. We hope to, at an early date, have our trucks equipped with radio-transmitters and receivers, and by it provide faster and better service for you.

Our new construction crew has been busy lately, not only in building new ylines, but in doing large scale line maintenance. We are converting some long secondary runs to primary voltage—thereby providing better voltage conditions. The fact that early estimates of the amount of electricity you would use have proven far too low, makes these changes necessary.

For a while the severe lightning storms we were experiencing kept us on the go. We lost as many as 5 transformers in one stormy night—35 in one month. It costs on an average of \$50.00 to get a transformer repaired top—so you see how the lightning season plays mischief with our budgets. Our engineers are now making a study of our needs for additional sectionalizers, reclosers and other protective equipment—we plan to push ahead on this and improve service as far as we can.

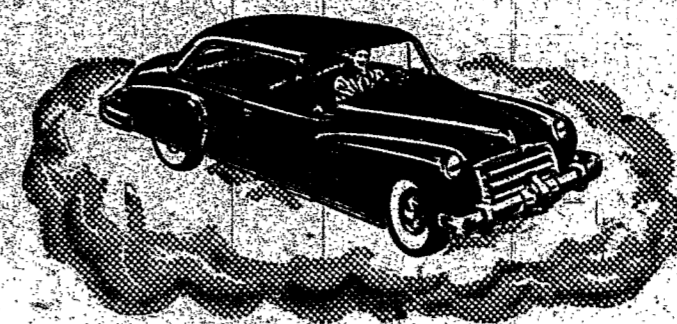

Your Board will probably settle on a headquarters building location at their October 14 meeting and we will report to you on the matter at the meeting on the 16th. We plan to build a modern, fireproof building to house all our facilities—general office, warehousing and garage space. The architectural firm of Biggs, Weir and Chandler of Jackson has been employed by your Board to study our needs and prepare plans for their consideration. We will report to you on this as soon as possible.

Your manager is anxious to know your opinion on our present arrangement of collection agencies. Direct payment of bills—that is, a direct remittance by check or money order to this office makes it

easier and quicker for our office staff, but if the collection agencies at the various points make it easier for you to pay your bills, then we want to keep them. Drop us a card and give your thoughts on the matter. Elsewhere in this edition are pictures and stories of our very efficient employees. We want you to know these folks—your manager thinks he is very fortunate in having such a loyal and hard working group to help him handle this com-

LEADER FURNITURE COMPANY

Bay St. Louis, Miss.

Be sure and register at our booth for the drawing of the Emerson Phono-Radio we are giving away.

Nearly 300,000 rural consumers were hooked up to REA-financed lines between June 30, 1946 and June 30, 1947.

The Smithsonian Institute estimates that it will take 30 times as many hard-working slaves as we have population to do the jobs electricity is now doing in America.

An electric milker cuts down milking time about one-third, according to the agricultural specialists.

For every dollar invested in building rural co-op power systems, it is estimated consumers spend \$4.50 on wiring and equipment.

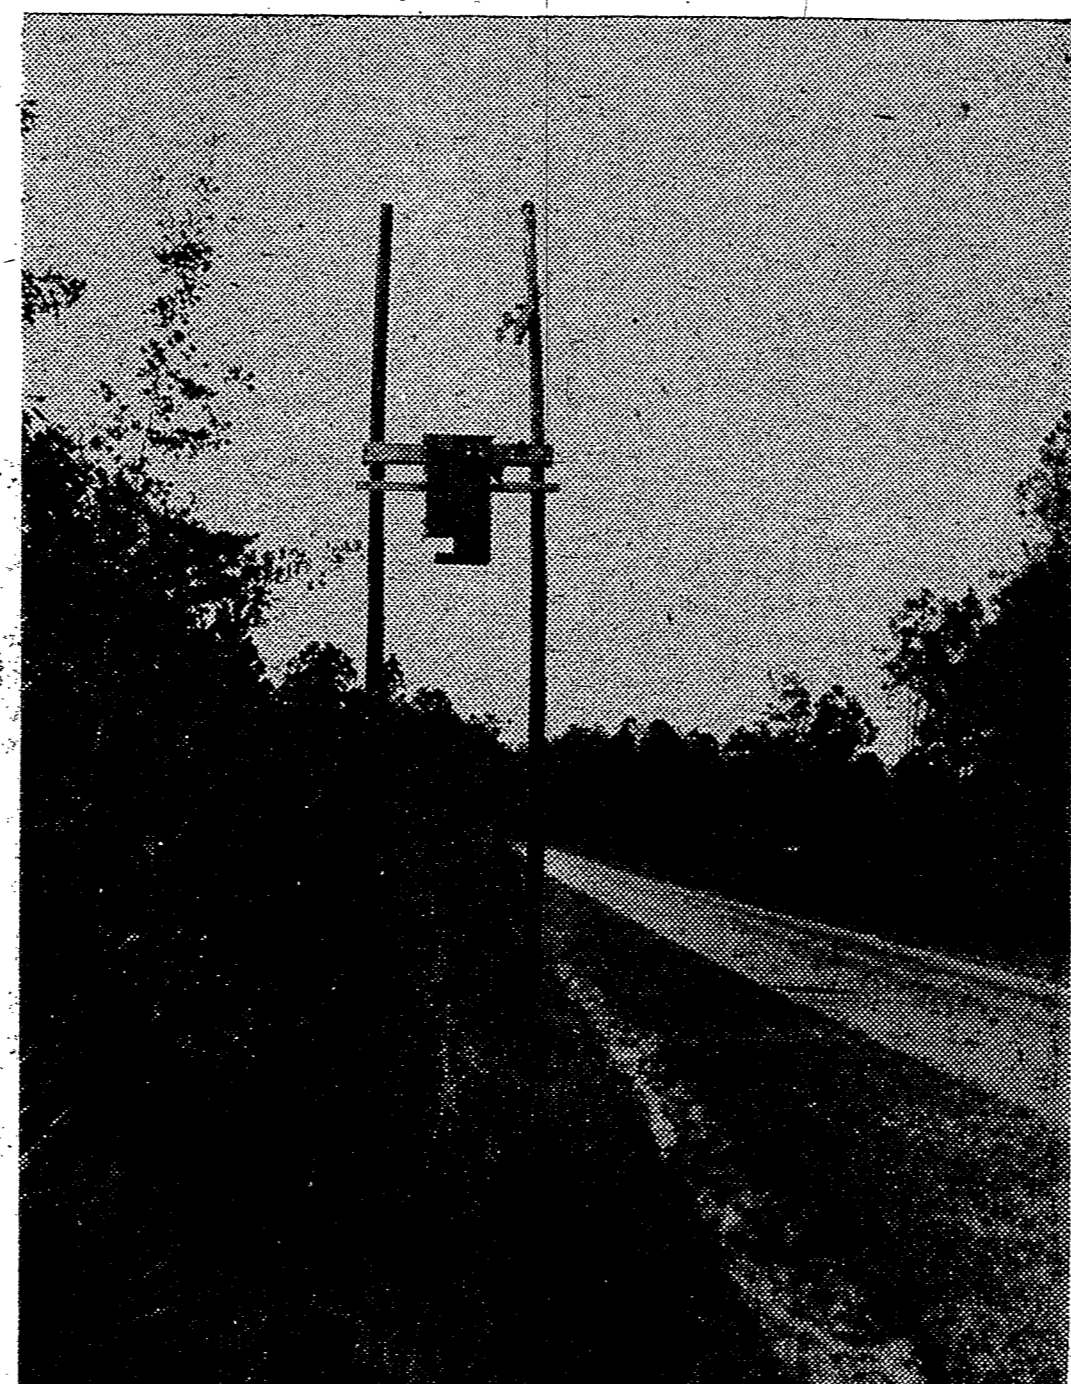

The Newman Cobb Dairy, located Northeast of Gulfport is the only three phase installation on the Coast Electric Power Association lines. The plant is one of the best accounts of the Power Association and is operated entirely by electrical power.

The plant processes approximately 1400 gallons of sweet milk; 100 gallons of Chocolate milk; 100 gallons of buttermilk, 200 12 oz. cream cheese; 50 gallons of coffee cream and 23 gallons of whipping cream daily.

The picture above shows Houston James, plant manager inspecting the filled bottles coming off the line of the electrically operated bottle filler and capping machine.

The plant is owned by W. D. Newman and James C. Cobb, and is equipped with the latest type milk processing machines. Numerous motors from one quarter horse power to the largest type motors are in operation in the plant.

Booster Regular located near Womarket in Harrison County. As primary line voltage begins to drop when line load is at its peak, this regulator automatically raises the voltage to its proper level.

Jellied Fruit Salad
(Recipe below)
Bread Butter or Margarine
Butterscotch Pudding

NOTE: Starred items (meal of the week special) in ad will make the meal.

Jellied Fruit
Salad

1 cup canned, sliced
peaches
1 cup peach juice
1 package lemon
gelatin
1/4 cup bottled salad
dressing
1/2 teaspoon salt
1/4 cup Per Milk
milk

Cut up peaches. Heat juice to boiling. Add gelatin and stir until dissolved. Cool thoroughly. Put salad dressing and salt into bowl. Add milk gradually and mix until smooth. Stir into cooled gelatin. Chill until mixture is slightly thicker than unbeaten egg whites. Fold peaches into chilled gelatin. Put into 4 wet individual molds or a quart mold. Chill until firm. Unmold. Serve on lettuce if desired. Makes 4 servings.

*Fresh or frozen peaches can be used if water replaces peach juice. Fruit cocktail and juice also can be used.

Hens need a fresh cool water to increase their egg production. As baby chicks, they are also raised in electric brooders. John Rester is shown observing one of his many groups of laying hens.

Care And Use Of Electric Systems

By T. P. Branch

REA Power Utilization Specialist U. S. Department of Agriculture. Pride of ownership which farm families feel for their livestock and the care they show on them is an old story that probably had its beginnings when primitive man first domesticated animals.

Pride of farm families in their electrical systems and equipment, is just as genuine and justifiable. But because these things are relatively new many farm families do not know the simple principles of care and maintenance which are essential for reaping the full benefit from their new servant, electricity. The wiring system is not ordinarily visible. But don't forget that an adequate wiring system is a preliminary requirement for satisfactory use of power.

Step one to having an adequate wiring system is to start right with careful planning. Plan to have a good wiring contractor install plenty of outlets of the correct type and plenty of circuits of adequate size wires, all protected by the correct sizes of circuit breakers or fuses at the panel or load center.

Step two is to have the original installation inspected and have periodic re-inspections every few years and after any additions or alterations have been made in the wiring.

If fuses blow out, replace them with the same size fuse—never with

a piece of metal nor with a larger fuse. Fuses are safety valves. Replacing them with wrong size fuses or with metal takes away this protection.

Electric lights help mightily to brighten life on the farm and are great work savers compared to smoky oil lamps. But even electric lights call for some care. Reflectors, bulbs and shades should be cleaned or washed occasionally in order to get the maximum amount of light from the fixture or lamp. Occasionally a bulb becomes dark from age or burns out and must be replaced. When that happens, be sure to select the correct type, wattage, and voltage bulb for the purpose and fixture for which it will be used. For this information, consult the manager or electrification advisor of your REA co-op.

Movable and portable equipment present their own special care problems which should not be overlooked by owners who want to enjoy the maximum service from their possessions. Such appliances depend on the use of flexible cords with an attachment plug for connection to an appliance outlet. Any injury to the cord—or the use of the wrong kind of cord for that matter—is likely to cause trouble.

Never disconnect the appliance by pulling the cord. Instead, pull the plug from the convenience outlet and thus avoid the danger of breaking the cord wires or pulling them loose from the connecting

plug. When cords are worn at the connection plug, they should be shortened and reconnected or should be replaced with new cords of similar type and quality. Keep cords free from grease and kinks. Protect them from being pinched or stepped on. See to it that prongs of attachment plugs are kept straight and parallel to each other in order to provide a suitable connection. Using the right type of cord is very important. For example a rubber covered cord is suitable for use with lamps, radios and so forth

but should never be used with heating equipment which requires a special type of cord having asbestos or heat resisting insulation. Heavy duty equipment requires heavy duty cords, for the reason that thicker wires and heavier insulations are required to carry enough electricity for most appliances. These should be connected to a wall outlet.

As different types of equipment call for different treatment and care, it's important to read carefully and follow faithfully the manufacturer's directions. If no directions are attached, ask your dealer or write the manufacturer.

Guard electric equipment against falls. Avoid over-heating appliances. Never put a heating element in water except one made specifically for immersion. Appliances should be cleaned regularly, however. Wipe off any spilled food immediately from electric cooking appliances, using a dry cloth on hot surfaces. After the equipment has cooled, clean with a soapy cloth. Rinse with a damp cloth and dry with a soft, clean rag. Space or air heaters should occasionally have dust removed from reflectors, grills or guards. No heating device should be cleaned while connected to a circuit. Always disconnect an appliance when you are through using it.

Electrical equipment works hard for farm families, but to keep them on the job requires care.

Although REA co-ops broke all previous records in building new power lines during the fiscal year 1947, there was still a backlog of \$278,000,000 in loan applications at the end of the year.

TO RELIEVE MISERY OF COLDS TRY 666
LIQUID OR TABLETS—SAME FAST RELIEF

The electric milk cooler is one of the daily farmer's most valuable assets. Wallace Peterson is putting a ten-gallon can of milk in his cooler. The temperature will drop from 98 degrees to 50 degrees in about 1 hour.

Poultry House Lighting

By D. W. TEARE, REA Farm Electrification Specialist

Profitable poultry production today requires the best poultry management practices and methods. The use of electricity is of increasing importance to poultry production because of the ease with which the light, heat, and power can be applied and used to increase flock production.

First on the list of electrical poultry uses is night lighting for laying houses. Research workers have discovered that hens begin to lay in the spring because the lengthening days supply the necessary 12 to 14 hours of daylight. When daylight hours are fewer, hens and turkeys will not lay regularly. By using electric light to lengthen the short fall and winter days to at least 12 to 14 hours, the hens can be forced to the springtime rate of production. Obviously if eggs are produced for market when prices are highest, the profit will be greater.

When to Light The Laying House
Night lighting should be started in late September or early October for pullets and in January for old hens. Birds are very sensitive to environmental changes and the amount of light should be increased gradually to prevent throwing them into a moult. A good plan is to turn the lights on only an hour a day for the first week, increasing the time 15 minutes each day until the total of natural and artificial daylight is maintained at 12 to 14 hours.

There are several methods of supplying the additional light, all of which obtained the desired produc-

Kiln Consolidated School is on the Coast Electric Power Association line in Hancock County. This institution was one of the original consumers when the power association was organized as the Hancock County Power Association.

tion increase. Lights may be turned on in the early morning and left until full daylight. They may also be used from sundown until 9 or 10 o'clock. Some poultry men prefer to have the lights on in the middle of the night to break the long roosting period in cold weather. When evening or midnight lighting is practiced, some method must be provided to dim-

the lights so the birds will have time to get on the roosts. At least one watt per 5 square feet of floor space in the laying house is necessary to keep the birds off the roosts when any one of the above three methods are used.

All-night lighting is another method favored by many because of its simplicity and other advantages.

With this method lights are turned on before sundown and left on until sunrise to full daylight. Forty watt lamps placed immediately over the food and water containers will supply enough light for eating and drinking. There will also be sufficient light to enable the birds to get on and off the roosts as they desire. Metal shades placed over the lamps will throw more light on the floor and shade the perches so the roosting hens will not be disturbed. When all-night lights are used no dimming device or time switch is necessary. The lights can be turned on and off with a hand switch and early morning rising or late at night attention avoided. Users also claim that the birds do not suffer from roosting too long on very cold nights because they can eat and exercise at any time if they get chilled.

It should be understood that night lights do not bring outstanding results unless the best poultry management practices are carefully followed. These should at least include the proper selection of laying stock, feed culling, adequate supplies of water, balanced feed rations, poultry house sanitation, and proper housing.

In adding up the benefits of night lighting, it should be understood that egg production above 65 percent is not desirable; also that an increase in fall and winter laying does not necessarily mean an annual increase in production. That is, hens tend to lay a limited number of eggs per year in accordance with their inherited capacity.

THE CHARTER OF INCORPORATION OF LE TERRE INCORPORATED

1. The corporate title of said company is LE TERRE INCORPORATED.
2. The names of the incorporators are: Edward I. Jones, Postoffice Bay St. Louis, Mississippi; Joseph Clarence Jones, Postoffice Baton Rouge, Louisiana; M. A. Harriel, Postoffice Perkinston, Rt. 2, Box 169, Miss.
3. The domicile is at Bay St. Louis, Mississippi.
4. Amount of capital stock and particulars as to class or classes thereof: \$11,000.00; \$1,000 Common Stock; \$10,000.00 Preferred Stock; 100 shares of common stock par value \$10.00; 200 shares of preferred stock par value \$50.00.
5. Number of shares for each class and par value thereof: 100 shares of common stock par value \$10.00; 200 shares of preferred stock par value \$50.00.
6. The period of existence (not to exceed fifty years) is Fifty Years.
7. The purpose for which it is created:

To buy, sell, alienate, hypothecate, mortgage, rent, lease and deal in land, real property, or any interest or using which shall be derived from the land in any way and any manner.

To buy, sell, own, alienate, hypothecate, mortgage, use, operate and control machinery, equipment or anything necessary or required for the recovery of any material, product, substance, ingredient, liquid or any other thing which might be recovered from the land by any method known or any method hereinafter to become known.

To buy, sell, own, alienate, hypothecate, mortgage, rent, lease, use, operate, possess or control transportation equipment of whatever nature is necessary, required or convenient for the processing of any raw material obtained from the land either above or below or on the surface.

To buy, sell, own, alienate, hypothecate, mortgage, rent, lease, use, operate, possess or control transportation equipment of whatever kind which might be necessary, required or convenient for the purpose of transporting any raw material, partly processed or fully processed products or any other things which might be necessary, required or convenient to convey for the purpose of furthering the business of this Corporation.

To buy, sell, own, alienate, hypothecate, mortgage, rent, lease, use, operate and control advertising agency, Sales Agency, newspaper, magazine, publishing company, printing establishment.

To invest, speculate, deal in stocks, bonds, mortgages, deeds of trust, life insurance and any and all evidences of debt, secured or unsecured. To enter into agreements, contracts, bonds or any other written instruments by whatever called, guaranteeing the market value of land on whatever terms or conditions that might be practical.

The rights and powers that may be exercised by this corporation, in addition to the foregoing, are those conferred by Chapter 4 Title 21, Code of Mississippi of 1942, and amendments thereto.

8. Number of Shares of each class to be subscribed and paid for before the corporation may begin business.

100 shares of common stock.

HEBER LADNER
Secretary of State,
EXECUTIVE OFFICE
JACKSON

The within and foregoing Charter of Incorporation of LE TERRE INCORPORATED is hereby approved.

In Testimony whereof I have hereunto set my hand and caused the Great Seal of the State of Mississippi to be affixed, this Twentieth day of September, 1948.

(GREAT SEAL)
F. WRIGHT
Governor.

Receipt No. 1896 L.
By The Governor
HEBER LADNER,
Secretary of State.

Recorded in the Secretary of State's Office this the twenty-ninth day of September, 1948.

Veterans assigned "C" (claims) numbers by Veterans Administration are urged to memorize them, so they can use the number readily when they write or call VA about their benefits.

Use of "C" numbers speeds up service to veterans VA said. A number is issued to each veteran applying for compensation, pension, schooling, on-the-job training or other VA-administered benefits. The number, appearing on his case folder, will identify him in VA records at the rest of his life, and may be used by dependents after his death.

With some 24,000,000 veterans' names in VA's files, "C" numbers often are the final means by which VA can distinguish one veteran from another.

All wiring on electric systems financed by the REA must be installed in accordance with the National Electrical Code.

U. S. Farmers use electricity in more than 350 different ways.

Farmers keep giving electricity more work to do. Last year, rural consumers, on REA-financed power lines, used an average of 123 KWH monthly as compared to 114 KWH monthly the year before.

Bare light bulbs cause glare. They should not be used without shades except in little-used parts of the house.

Dark lamp shades absorb light. The same bulb will give 50 percent more light with a white or ivory shade.

REA-financed electric systems have brought power to 22,000 rural schools.

Your Electric Hand Iron

By Oneta Litter, R.E.A. Electrification Specialist

A recent study shows that the equivalent of ten 8-hour days a year can be saved by the homemaker who uses an electric iron instead of an old fashioned sadiron. At the same time, she saves as much as 15 percent of the energy she uses in ironing an average family wash. That saving of energy and time can make a great deal of

difference to a busy homemaker in a long weeks work.

Already many farm households depend upon the electric iron as an important convenience. Other families, who have recently put electricity to work on their farms, are just now in the market for an iron. But whether your electric hand iron is an old and trusted friend or still just an item on your shopping list, you will want to consider carefully its proper use and care. This can mean not only longer life for a vital piece of equipment, but also will allow the homemaker to take full advantage of the possible sav-

ing in time and energy.

Buying Your Electric Iron
It is much easier to find electric irons at your local appliance store today than it was last fall. Supplies are more abundant in almost all parts of the country; and some irons now on sale offer improvements and new features not available in those shown just before the war.

You can find some models which can be used as either a steam iron or an ordinary dry, electric iron. Such an iron may be used successfully as a steam iron for routine steam pressing jobs as trousers, shirts and jackets.

Then you may use it as a dry electric iron for the rest of the week's ironing. Some of the models are fairly light for a steam iron, weighing a little more than four

There is nothing more important in ironing than the right heat for the job. Make sure there is a good automatic temperature control that is located where you can see it to provide the right heat for ironing and to keep the iron from getting dangerously hot. You will want the dial on your iron to be marked with the names of the material. Too much heat can quickly ruin some fabrics such as rayon, nylon and others which require low heat for ironing. Too little heat means extra hours of work for you. The control makes it simple to maintain the proper heat for the fabric you wish to iron.

A light weight iron is important for most efficient handling; it saves energy too. You can find models weighing from three to four pounds including the cord. These irons usually have a 1000 watt rating or more, thus enabling them to maintain the necessary heat even though they are light.

An attached cord gives longer service, and it is always there when you need it. Most women find the side attached cord more convenient to use. But whether you are buying an attached or detachable cord, select one with a protective metal or rubber collar where it is connected to the iron. It wears much longer. The cord should be at least six feet and preferably eight feet long. And be sure it bears the Underwriters Laboratories seal.

You might like to check the model you choose to be sure it is well-balanced and that the handle is comfortable for you to grip. Try the iron in the position, whether the iron rests on its heel, its side, or its own built-in stand. It should feel natural to you.

Other features to watch for are chromium plated steel sole plates, much less easily scratched than the softer materials used in a few models; curved and bevelled edges to permit easier ironing of neckbands, sleeves and armholes; air-cooled

tips that protect your fingers from burns; swivel-type cords for more freedom of movement.

How To Use Your Iron
It is easy to do a big family ironing with maximum efficiency if you follow only a few simple rules of organization:

1. Group your clothes according to their fabrics and types.
2. Sprinkle the clothes evenly and have them fairly damp. If you are in a hurry, sprinkle with warm water. It spreads more quickly than cold water. You can do a better job if you use a bottle that has a cap with small holes in it, or a small whisk bloom.

3. Use a well-padded ironing board that is the right height for you to be able to work comfortably. Good lighting where you iron saves time and energy. It helps you to get better results.

4. Connect the iron to a convenient outlet on an appliance circuit. The wiring of the light drop cord is too small for safe use of the average 660-watt iron, and the standard light socket is designed to carry only 250 watts. A 1,000 watt iron should never be attached to a drop cord. An iron attached to a drop cord heats slowly. It produces excessive heat and wear on the drop cord, too.

5. Arrange your work so that you can iron rayon articles and similar materials first at low temperature settings. This will save both time and electricity. Next, iron silks, then cottons and linens, which require the highest temperatures.

How To Care For Your Iron
You will get longer and better service from your iron if you give it good care.

When you are unplugging your iron, take hold of the plug itself. Pulling the cord may loosen the connections within the plug, or may even pull the cord loose from the plug. A loose connection may blow a fuse or trip the switch. It may cause over-heating, which in time would ruin the plug. Be sure to connect and disconnect at the convenience outlet first and not at the iron itself. Disconnecting the cord from the iron when the current is on may cause sparking. Such constant sparking will ruin the plug.

Cooling Milk Electrically Pays Dividends

By IRA MILLER
Farm Electrification Bureau

As every farmer knows, milk is a very perishable food. If it is not cooled to 50° or less within about two hours after milking, quality suffers due to rapid growth of bacteria. This means a lower price to the farmer and can easily result in the loss of some milk.

to below 50° by pouring it over a refrigerated aerator. After being cooled, the milk is either bottled or put in cans before storing it in either a "walk-in" or a "lift-top" refrigerated dry storage box.

Farmers have found electric milk cooling the modern way to handle a vital step in producing high-quality

An Immersion Milk Cooler.

Dry Storage Cooler Showing Aerator at Left.

Modern electric milk coolers represent the surest, easiest and least expensive way to cool milk on the farm. There are two types of electric milk coolers from which to choose.

Immersion Cooler. The cans of milk, put directly in a tank of refrigerated water, will be cooled to below 50° in 1½ to 2 hours. If faster cooling is required an agitator is used in the bath. The cans of milk are left in the tank until ready for delivery.

Aerator and Dry Storage. With this type of cooler, the milk is first cooled

milk. The operating cost is surprisingly low—not over five cents for electricity to cool and store 100 pounds of milk. With over 2,500,000 farms connected to power lines, those dairymen not now owning electric milk coolers plan to buy one as soon as they can arrange for its purchase.

Manufacturers, your agricultural college, dealer, or electric company will be glad to provide you with detailed information on electric milk cooling and how soon you can obtain one.

and the connector-terminals on the iron may have to be replaced. Clean the sole plate of your iron by wiping with a damp cloth; then dry it off. Give your iron time to cool before you store it. Some homemakers prefer to store their irons in the

inexpensive metal holders that are available through the appliance dealers in most sections. Roll the cord up loosely, or hang it over a thick hook or peg. Sharp bends in the cord may break the fine wires inside. Be sure the cord is always clean and dry.

THE LAW REQUIRES THE COLLECTION OF TAXES ON PERSONAL PROPERTY—SECTION 989—MISS. CODE OF 1942, PROVIDES:

Upon default of the payment of any taxes upon the due dates prescribed in this Act, the tax collector shall proceed immediately to collect all installments of taxes then remaining in default and unpaid, by distress and sale of any personal property liable therefor; and such sale shall take place at the courthouse door, unless the property distrained be too cumbersome to be removed; and five days' notice of the time and place of sale shall be given by advertisements put up in three public places in the county, one of which shall be at the courthouse door; provided, however, that sales for delinquent municipal taxes shall be advertised in the manner and made at the place designated by ordinances adopted by such municipalities. The collector shall be allowed to collect and retain in addition to the taxes, interest, fees and costs, all necessary expenses of removing and keeping the property distrained. If sufficient personal property liable for taxes cannot be found by the tax collector, the tax collector may make a list of indebtedness due the taxpayer by other persons and sell the same as hereinafter provided. It shall be the duty of the tax collector to enforce the provisions herein contained and to collect all the taxes due by distraint and sale of personal property; and for any taxes levied against any lands due and remaining unpaid, after the fifteenth day of February and the fifteenth day of August the land shall be sold as provided by law for the sale thereof.

Start Right With A Good Farmstead Wiring System

By Thomas P. Branch
REA Power Utilization Specialist
U. S. Department of Agriculture

Many of the people who will be hooked up to the highlights this fall and winter have been waiting for electricity a long time. Now that electric service is within their reach, however, they have a golden opportunity to profit from the wiring experience of their neighbors and wire properly in the beginning.

Good wiring means more than just wiring to meet present needs adequately, safely and conveniently. That's important, of course. But looking ahead and allowing for any future needs that may develop is important too. Your neighbors who have had electricity for 5 or 10 years will tell you that they are using electricity to do heavy-duty jobs they never expected to use it for—to operate welders, pumps, water heaters, kitchen ranges, and to do dozens of other chores.

All this takes power—and too often poorly planned and inadequate wiring systems aren't capable of carrying such a heavy load efficiently and safely. On many of the 3½ million electrified farms today, the use of electricity is hampered because main wires from transformer to meter pole or from meter pole to farm buildings are too small to carry as much electricity as is used on the farm. In other cases, farm houses and buildings have been wired without provision for enough sets of wires or circuits, or enough

outlets for connecting electrical equipment. In such cases, the owners of the inadequately wired property are faced with the necessity of making expensive additions to their wiring system, of rewiring, or of taking a chance on an overtaxed wiring system which is both inefficient and dangerous.

The way to avoid such unhappy alternatives and to start out with an adequate wiring system is to plan carefully, get advice from your neighbors and from the manager or electrician employed by your electric co-op as well as from the electrician who will do the job. Finding a good electrician is especially important. The best electrician or electrical contractor you can get and the best materials are the most economical and the safest in the long run.

Although the entire farmstead need not be wired all at once a complete wiring job at the outset is usually most economical in the end. Regardless of whether a partial or a complete wiring system is installed, however, feeder lines and circuits should be installed in such a way that they may be added to later without expensive changes.

If you think you might buy an electric range, water heater, welder or heavy-duty farm equipment, be sure to ask the co-op for a three-wire connection from the transformer. If more than two buildings are to be wired the meter should be placed on a meter pole located about the same distance from each of the buildings to be wired. Separate sets of wires or feeder circuits may then be run from the meter pole to each of the buildings. An automatic circuit breaker should also be installed on the meter pole so that if the wires become overloaded the device will automatically turn off the power and protect the transformer from damage.

Wiring installed in each building should follow approximately the same plan. Incoming wires go to a local center from which branch circuits should extend to the various parts of the building. The load center must include some form of fuse or circuit breaker protection. Plenty of outlets and room for adding two or three extra circuits when needed should be provided for in the initial wiring.

Remember that wiring is a permanent improvement to your farm which will be in continued use for many years. So don't skimp on your wiring. You will save money by doing a good job at the outset. A good wiring system will give dependable service year after year with surprisingly little upkeep.

If your iron cord is detachable, disconnect it at the convenience outlet—not at the iron.

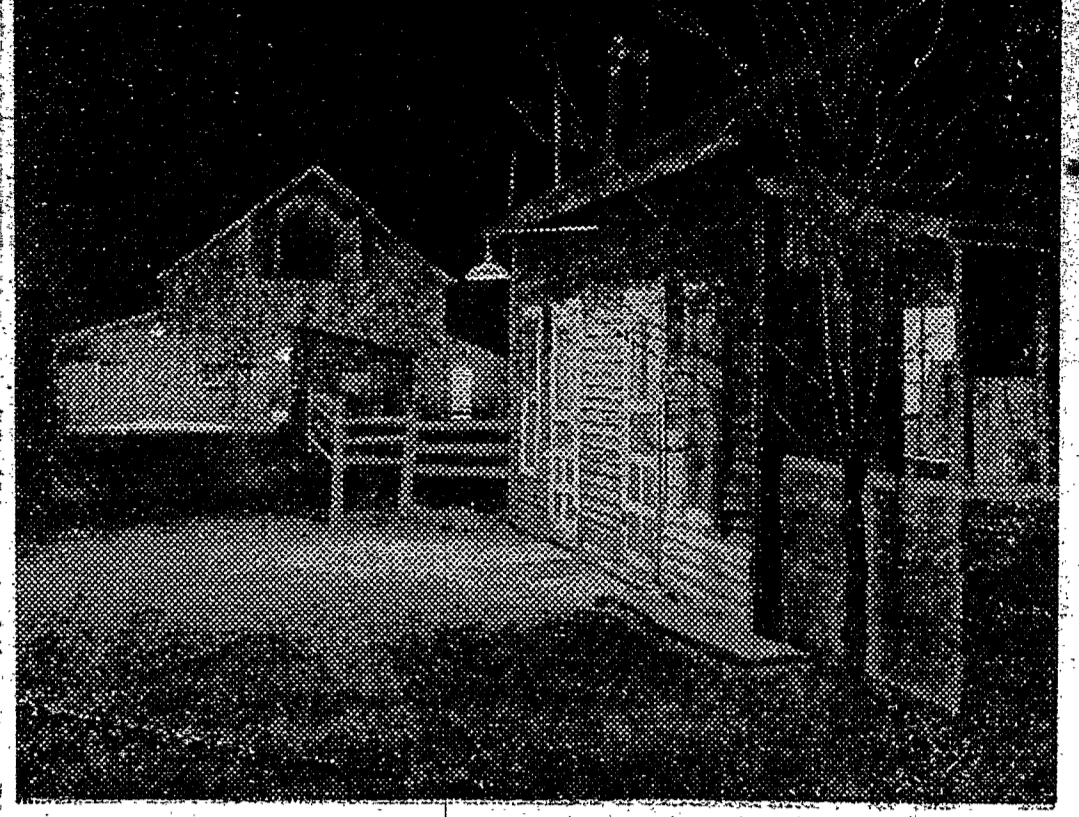

If she gets all the water she wants a cow will give 8 to 15 percent more milk.

Adequate Wiring Required for Getting Most Out of Equipment

By IRA MILLER
Farm Electrification Bureau

An adequately wired farm is most likely to be a productive farm—for adequate wiring is the foundation upon which efficient operation of time-saving electrical production equipment is based.

The finest electrical production equipment is almost as ineffective, from a performance standpoint, on an inadequately wired farm as it is in a

ON SMALL OR LARGE FARMS—it's adequate wiring which makes the wheels go 'round where electrical production equipment is concerned.

dealer's display room. An improperly designed wiring system, which is incapable of providing the maximum voltage needed may reduce the efficiency of electrical equipment by 25 percent or more.

Requirements for adequate wiring are: A service entrance of correct size, enough circuits, each with the correct wire size; heavy-duty circuits for range, water heater and larger motors, and sufficient outlets and switches.

Because an adequate wiring system is so important in operating "food factory" equipment effectively, it should be planned with regard to future as well as present requirements. To get an accurate picture of electrical power, think of it as "flowing" through wires as water flows through a pipe. Just as a pipe the size of a straw could not carry enough water to irrigate a garden, so will small wires be unable to carry enough current to properly operate farm production equipment.

It is wise economy to arrange for plenty of outlets in various farm buildings in order to provide sufficient lights and "plug in" receptacles for equipment. This is particularly necessary in farm shops where a number of stationary and portable tools are used. Yard lights and similar reflector-type lights over doorways of buildings entered at night will help prevent accidents and keep marauders and predatory animals away from poultry and stock. Better fixtures, perhaps of the fluorescent type, will increase a farmer's "seeability" and boost his efficiency when accurate, detail work must be done.

Here's a thumb rule to guide farmers in their circuit requirements: Install 15 ampere circuits for lights, 20 ampere circuits for appliances and special circuits for motors over 1/3 horsepower. For special circuits serving motor loads, circuit protection, provided through circuit breakers or fuses, should be based on the electric load served.

Types Of Electric Pumps For Rural Water Systems

By Earl L. Arnold, Power Utilization Specialist Rural Electrification Administration

The farmer who is buying an electric pump for a water system is often puzzled by the variety of types of pumps. He wonders how he can get the one best suited to his needs. This article is written to help farmers make this selection.

All water pumps can be divided into two large groups: (1) shallow well pumps, and (2) deep well pumps. The forces of nature have made this

difference and there is nothing any manufacturer can do to change it. Deep well pumps may be used in shallow wells, but shallow well pumps will not work in deep wells.

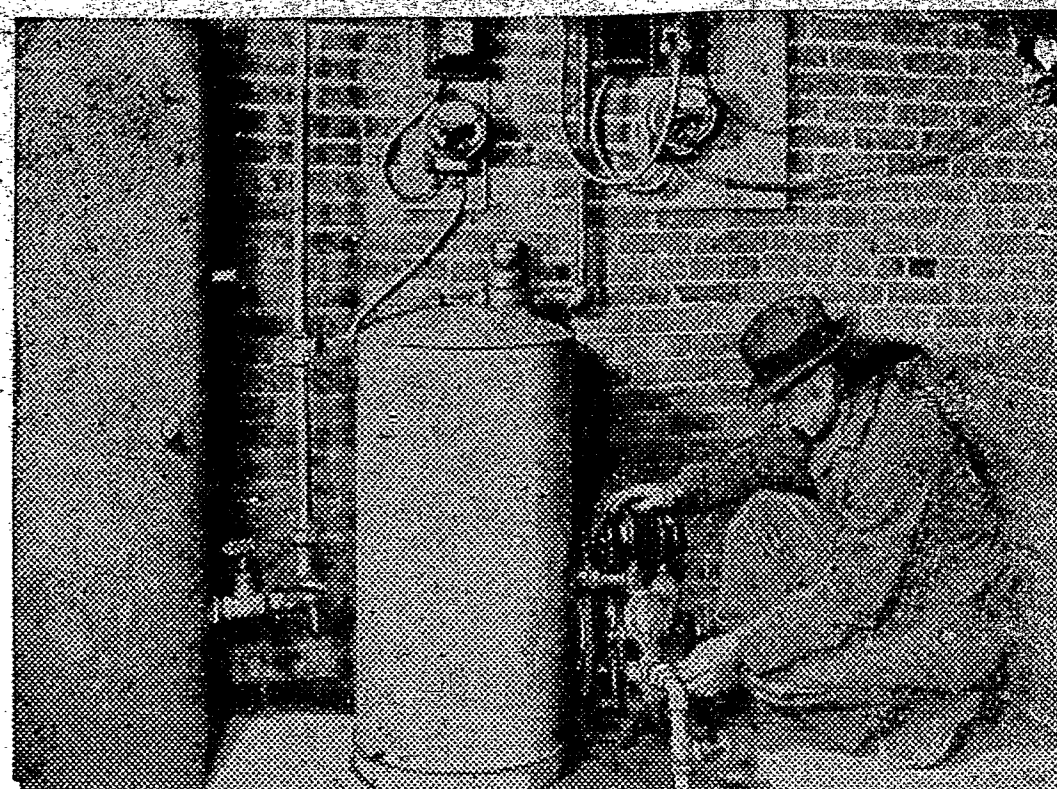

While different styles of shallow well pumps differ a little in the depth from which they will satisfactorily draw water, for practical purposes we can say the limit is about 22 feet. If the depth from the pump to the water while the pump is running is greater than this, a deep well pump must be used.

Every farmer is familiar with the old-fashioned hand pumps that have

Drudgery of Pumping, Carrying Water Makes Way for Progress

By IRA MILLER
Farm Electrification Bureau

No longer a luxury item on modern, progressive farms, an automatic pressure water system, with water piped to every point where it will be useful, provides the entire farm family with many "city" benefits to add to the joys of healthful rural living.

RURAL ELECTRIFICATION—takes over the farm pumping chore.

Pumping and carrying water by hand is one of the most annoying and time consuming of farm chores. No small boy totting water for a circus elephant ever became more discouraged about completing his task than the farm youngster, his dad, mother or the hired man in performing the unending job of keeping stock tanks, hog and chicken waterers filled. Supplying water for cooking, washing, bathing and the garden presents additional burdens, when the job is done manually. A water system is the life stream of farm production. An adequate water supply at all times means that cows give more milk; hogs, cattle and other livestock put on weight faster; gardens grow more vegetables; hens lay more eggs and poultry grow larger. United States Department of Agriculture figures show that the daily consumption of water on the farm totals 35 gallons for each member of the family, 35 gallons per milk cow, 12 gallons per steer, dry cow and horse; 3 gallons per hog, 2 gallons per sheep and 3 gallons for each 100 chickens.

Electric water systems pay for themselves within 2 years on most farms in greater profits realized from farm products and in saving farmers time and manpower to expand their

activities. The average farm family should plan on a system which pumps about 500 gallons of water an hour. Power costs are low, one dairy farmer reporting that electricity, consumed in supplying 1,000 gallons of water for his needs, costs him only 3 cents. Surveys of 8 typical Illinois dairy farms record that requirements of water for each were provided by an average electrical consumption of 33 kilowatt hours of power a month. Studies made on an Ohio farm showed that the installation of an automatic pressure water system saved the operator 35 hours of "pumping and totting" time a month, and that he used this "free" time to farm more land and milk more cows.

Aside from the dollars and cents value directly received, running water provides protection against the farm fire bugaboo. Also, public health records indicate that the installation of a pressure water system in the farm home improves health conditions more than 50 percent.

In planning a water system, farmers should consult their dealers or power suppliers for assistance in determining the proper piping layout, the type of pump needed (deep or shallow well) and its proper location.

plungers in cylinders. Sometimes the cylinder is in the pump stand and sometimes it is lowered into the well. When the cylinder is in the pump stand it is a shallow well pump. When it is lowered into the well the pump is a deep well pump. The same applies to electric pumps.

Shallow well pumps are cheaper than deep well pumps. Except where jet pumps are used it is not economical to use deep well equipment in a shallow well.

Different manufacturers use several different types of mechanism construction in their pumps. These include plunger pumps, turbine pumps, centrifugal pumps, rotary pumps, and jet pumps. A shallow well pump may be any one of these types, but a deep well pump will be either a plunger or a jet pump. Deep well turbines and rotary pumps are also made but only in sizes larger than those used in most farm water systems.

Jet pumps are the most popular type today. They are made both as shallow well and as deep well pumps. They are the most difficult type to understand because what is known as a jet pump is really two pumps. One part of a jet pump is shallow well pump—usually centrifugal, but possibly plunger, turbine, or rotary. The other part is the jet nozzle opening into a tapered pipe called a venturi. Water under pressure from the centrifugal pump outlet is forced at high velocity through the jet nozzle and through the venturi. As it passes through the venturi, the jet of water draws additional water from the well up to within the suction lift of the shallow well pump at the top.

A deep well jet pump consists of a shallow well pump to which a jet nozzle and venturi have been added with the jet nozzle and venturi located in the well. A shallow well jet pump consists of a shallow well pump of another type to which a jet and venturi have been added inside or near the main pump housing. This combination makes the pump capable of pumping against higher pressures than would otherwise be possible.

Jet pumps have their greatest advantages when the depth to water is between 22 feet and about 80 feet. At shallower depths, other types of shallow well pumps are equally satisfactory. At greater depths, the old-fashioned plunger-type deep well pumps are more efficient. Between these depths the jet pumps are very efficient. They may be offset from the well instead of being placed directly over it. This often allows the pump to be placed in the basement, wood shed or other protected location instead of out in the yard where it would be necessary to build a separate pump house.

Thus a farmer has three choices when he selects his pump:

1. If the depth of water is less than 22 feet when the well is being pumped he should choose a shallow well pump of a type that appeals to him.
2. If the depth to water is between 22 feet and 80 feet he will need a deep well pump. He may choose either a plunger type or a jet type, with the jet type being preferred, particularly if it is not desirable to locate the pump directly over the well.
3. If the depth to water is more than 80 feet a plunger type of deep well pump is usually best, although jet pumps will work at depths much greater than this. At these greater depths, plunger type pumps are usually most economical.

THE CHARTER OF INCORPORATION OF AUGUST RAUXET INCORPORATED

1. The corporate title of said company is

AUGUST RAUXET INCORPORATED

2. The names of the incorporators are:

August Rauxet Jr., Postoffice Bay St. Louis, Mississippi

Mrs. Vera Rauxet, Postoffice Bay St. Louis, Mississippi

Mrs. A. Rauxet, Sr., Postoffice Bay St. Louis, Mississippi

3. The domicile is at Bay St. Louis, Mississippi

4. Amount of capital stock and particulars as to class or classes thereof:

\$5,000.00 Common Stock

5. Number of shares for each class and par value thereof:

100 Shares \$50.00 par value

6. The period of existence (not to exceed fifty years) is Fifty Years.

7. The purpose for which it is created:

To construct, build, make and erect buildings, structures, edifices, bridges, tunnels and every and any kind of material structure, which can be done by a General Contractor.

To own, manage and operate a building material and supply store, both wholesale and retail.

To own, operate and manage logging operation, sawmill, planer mill, lumber mill and every and any other necessary or convenient enterprise to assist, foster or complement said business.

To own, manage, operate and deal in land for investment or speculative purposes. To buy, sell, trade and deal in stocks, bonds, mortgages, certificate of debt and any and all evidence of debt of whatever nature or character.

The rights and powers that may be exercised by this corporation, in addition to the foregoing, are those conferred by Chapter 4, Title 21, Code of Mississippi of 1942, and amendments thereto.

8. Number of Shares of each class to be subscribed and paid for before the corporation may begin business.

10 shares of common stock.

Electricity Will Do Variety Of Farm Jobs

If it's a chore job on the farm or an every-day job in the home, nine chances out of ten electricity will do it better, faster and for less money, say farm electrification specialists of the Rural Electrification Administration in a special report prepared for the Sea Coast Echo.

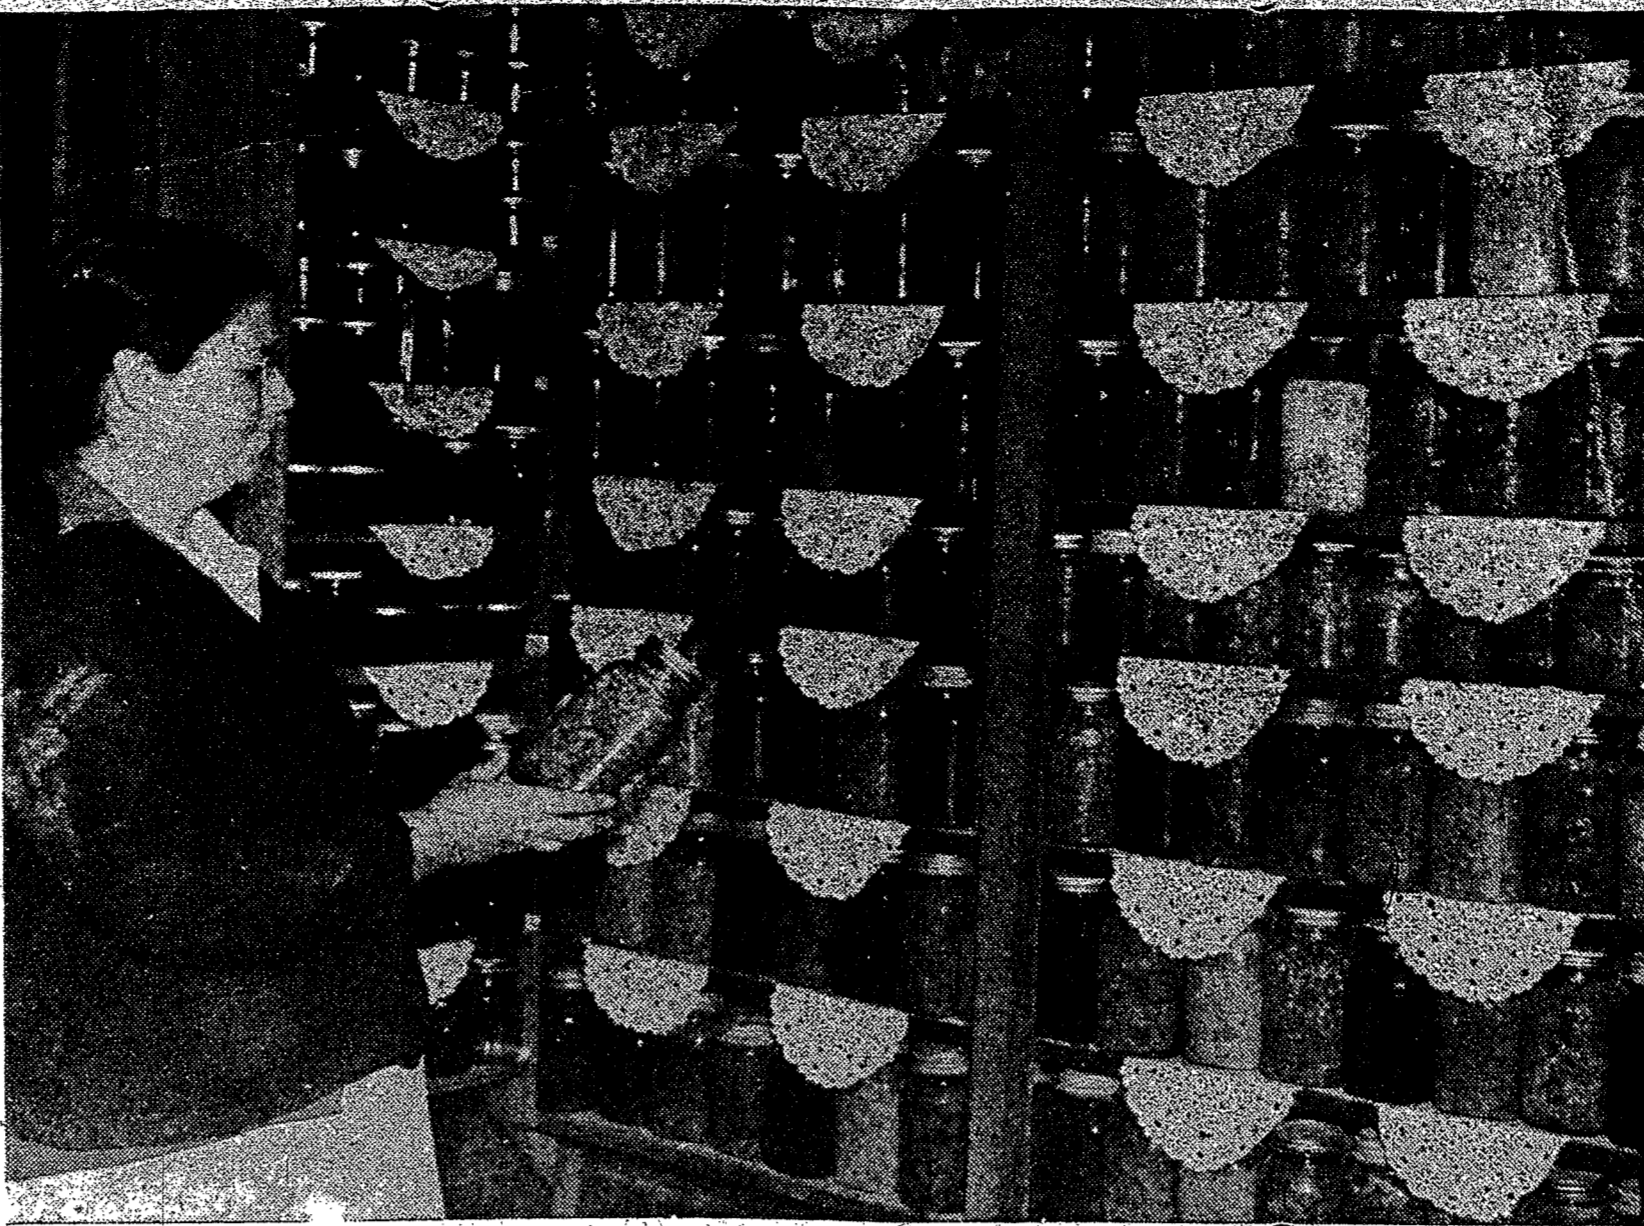

Sketching some of the possibilities opening up to Mississippi farmers, the report points out that electricity not only brings rural people city conveniences—electric lights, running hot and cold water, electrical refrigeration and electrical re-

frigeration and electrical household equipment and appliances—but also provides the means of more efficient farm production by taking over scores of routine farm jobs.

Interest in Home Freezers

New uses of electrical equipment are being brought to light and developed every year, REA reports. Of special interest to farmers this year, the specialists say, is the farm-sized food freezer and storage cabinet—a family-size locker plant which the farmer with electricity can set up in his basement, kitchen or in some other convenient place. With one of these he can keep fresh meat right on the farm during dog days, and strawberries from his own patch in January and have garden-fresh peas all the year round, all without driving to the locker plant in town.

Even more widely known for its contribution to better farm living,

Men and electricity aren't everything around a farm. Mrs. Lewis Lee is showing the photographer a part of her canned food put up for winter use.

the specialists report, is the household refrigerator. This not only provides refrigeration for food used by the farm family, but also for keeping small quantities of milk, cream, butter, eggs and poultry, produced for market. Where larger refrigeration capacity is required, walk-in cooler may be installed.

Water Systems Help

Automatic pressure water systems rank near the top of the list of electrical equipment when it comes to all-around usefulness on the farm, the specialists say. The average farm family pumps and carries tons of water every year. An electric pressure water system will provide a constant supply of water, day after day, with little attention for only a few cents a day. Water may be piped where it is needed, with automatic float valve arrangements to keep stock tanks and chicken and hog waterers filled without attention from the farm family.

"Not only does such a water system save time," the specialists declare, "but in addition it increases production of milk, meat and eggs. The logic of this is not hard to understand when you recall that milk is 87 percent water, meat is about 60 percent water and eggs are 65 percent water."

The REA specialists say that a farm water system can also be used to increase the yield from Mississippi gardens if provisions are made for watering during dry weather. A well-watered garden may produce 2 to 10 times as much as a garden depending on rain fall alone. Watering may be done by means of a rotating sprinkler, overhead pipes, porous hose, or by surface irrigation.

Aids to Dairying

Electricity is particularly useful in dairying, either in dairying on a large scale or when only a few cows are milked to supplement grain or general farming, the REA report points out. An electric milking machine, for example, will usually cut milking time in half with herds of 10 or more cows. Frequently the entire milking job can be turned over to women and children, during the rush season at least, machines are available.

Running water for the dairy not

only aids in meeting sanitation requirements, but saves time and labor in washing utensils and in cleaning barns and milk rooms. Automatic water heaters also contribute to greater efficiency and cleanliness while the availability of a constant supply of water for the dairy cows through automatic drinking cups helps to assure maximum milk production.

Many farmers find that with electricity, it is profitable to install an electric milk cooler and sell whole milk instead. Immersion type milk coolers are available in sizes varying from coolers made to hold two cans to those of 12-can capacity. These are satisfactory for both cooling and storing milk and enable the farmer to meet cooling requirements. Dry cold storage boxes of various capacities are also available but where these are used it is usually necessary to pre-cool the milk by means of an aerator.

Turns The Separator

"If a farmer wishes to sell cream instead of whole milk electricity will help him, turning the separator while he finishes the milking," the specialists add. "Either a small motor can be belted to his old cream separator or a new separator with a built-in motor may be purchased."

For poultry raisers, one of the most popular pieces of electrical equipment is the electric chick brooder. This is fully automatic, requires no re-fueling and has little fire hazard. With such brooders, either commercial or home-made, farmers have found that it is little or no more trouble to raise 1,000 or 1,500 chicks, than it used to be

to raise 500 chicks with brooders that had to be watched, refueled and tended. This is especially true where an electric water system is available to supply necessary drinking water.

Power In Poultry Raising

Many aids are also available for farmers with laying flocks. The specialists say that where electricity is available, poultry raisers have found it profitable to use lights in the henhouse, during the fall and winter months to maintain egg production when days begin to get shorter and layers ordinarily go into a seasonal slump. Inexpensive water warmers are also available to keep poultry waterers from freezing over during cold weather and cutting down on egg production.

REA reports indicate that one of the most effective types of electric equipment is the home-made pig brooder. This is simply a small, home-made shelter heated by an ordinary electric light bulb, usually about 150 watt. Figures show that on the average, out of every 10 pigs farrowed alive, as many as three die before weaning time, most of them during the first few days as the result of chilling or crushing. Since these home-made brooders provide shelter for the pigs away from the sows, they virtually eliminate these losses.

Free plans for these brooders, as well as for other home-made electrical equipment are available from rural electric cooperatives or direct from REA, U. S. Department of Agriculture, Washington, 25, D. C.

Overheating shortens the life of an electric iron.

"EXTENDING HOSPITALITY" "OFFERING OPPORTUNITY"

A very appropriate slogan for Hancock County.

A more hospitable people will not be found. The people of Hancock County will go out of their way to be courteous, and attentive to the wishes and needs of those who come into our midst as strangers. They are thoughtful of the wants and needs of their fellow men who are their neighbors.

Hancock County offers many opportunities--Dairying--Forestry and its by-products--the Fishing Industry--and many others that can and should be developed.

The Coast Electric Power Association had its inception in Hancock County as the Hancock County Power Association, and we are indeed happy that our people had the foresight to move forward and seize the opportunity to bring to the people of the rural areas of our County, Pearl River and Harrison Counties, electrical power to help in the development of this wonderful section of Mississippi, and to bring to the rural homes the facilities afforded the people of the urban centers.

The Coast Electric Power Association has grown to great proportions and as it moves ahead, the area that it serves is growing with it. Today, many of our families are making their living at home with their dairy farms. Electrification has made this possible. The people of Hancock County realized the need of electric power and were offered and accepted an opportunity. Today with electrical power in every section of the County, an opportunity is offered you to come in our midst, and settle in this "land of opportunity," bordering on the Mississippi Sound.

To the 3800 members of the Coast Electric Power Association we bid a hearty welcome to Bay St. Louis for your annual meeting on October 16, 1948. May your stay be pleasant and your meeting successful, and may you cooperate to build a bigger and better Coast Electric Power Association.

Know Your Lighting Facts And Save Your Eyes And Money

By Lousian Mamer
REA Home Electrification Specialist

Have you kept up-to-date in new developments in lighting? Lots have happened since the passing of the kerosene lamp era. So in case you haven't been following recent findings in the electrical field, it would be wise to check up on your lighting ideas to be sure that they are in line with the times.

The newest thing in fluorescent lighting is circular tubes which permit fluorescents to be used in round fixtures. These tubes can be used alone or with incandescent bulbs in either fixtures or lamps.

Among the advantages of fluorescent lights are that tubes are cooler, last longer, and ordinarily give two or three times as much light for the same wattage. Although the initial cost of tubes and fixtures is higher than for conventional bulbs and fixtures, fluorescent lights frequently make up for this extra cost in four or five years through saving in current. If fluorescent fixtures are to be hung near the ceiling, the ends should be plastic or glass instead of metal which will cast undesirable shadows. Fixtures should be properly equipped to prevent radio interference.

In incandescent lighting things have been happening too. For instance, nine new lamp models will soon make their debut under the Certified Lamp Makers' program. These "certified" lamps will make use of the diffusing bowls which characterized most of the advanced prewar lamps but will use thinner and better quality white glass. A metal section flaring outward above the open-top glass globe will direct light downward and help prevent spilling of light on the wall above the lamp.

For families who are planning to buy electric equipment soon, news on the postwar developments in lighting will be of a particular interest—and practical value as well.

Shoppers, for instance, would do well to take note of a new buying aid which is to be used with some fixtures. In the future, "certified" fixtures will carry labels giving in-

formation regarding their correct use. This information will include bulb sizes or sizes needed for efficient use of the fixture, height above floor at which a fixture should be hung, use for which the lamp is adapted, whether the STUDYING, READING, WRITING, size of the room for which the fixture is designed. Fixtures suitable only for small rooms will be marked "For rooms of 60 sq. ft. or less."

A Few Lighting Tips
But even if you aren't planning to buy new lighting fixtures, it's well to know your lighting facts to be sure that you are making the best use of your old equipment.

Avoid using bare bulbs except in closets and infrequently used parts of attic or basement. Reason: unshielded lights cause eye strain. In cases where light is not used for long or where it is out of the line of vision—on the sides of a bathroom mirror or under the cupboards over kitchen work space, for instance—an unshielded fluorescent tube may be used, however.

Every room in the house should, with few exceptions, have a ceiling light to provide economically for general lighting. Having enough portable lamps turned on is another means of providing general lighting but this is more expensive than using a ceiling fixture. Ceiling fixtures should be simple and inconspicuous and the light from them should be comfortable to the eyes.

More money should be spent on portable lamps for close-up vision than for fixtures, if economy is an object which it usually is.

In selecting a ceiling fixture, choose one that is about as many inches wide as the room is wide in

feet. If the light shines through the fixture, be sure it shines evenly—not spottily.

General lighting should be used along with any portable lamp to avoid eye strain which results when there is too great a contrast between the light on your books or news, paper and the dark in the room around. Avoid low, squatly portable lamps and purely decorative lamps which disregard good lighting principles. A good lamp should have a diffusing bowl to reduce glare and soften light, a wide, white-lined flaring shade and sufficient height to give a wide circle of useful light.

How Many Watts?
Use the correct size bulbs in your lighting equipment. For example, a reading lamp with a diffusing bowl requires as a minimum a 100-watt bulb to provide the light required for good seeing. The wattage requirement of a fixture using incandescent bulbs varies in direct proportion with the diameter of the fixture. Thus a 14-inch fixture needs about 150 to 200 watts, a 12-inch fixture requires 150 or 100 watts; a 10-inch fixture, 100 watts; and a 8 or 9 inch fixture uses 75 watts. In smaller diameter bowls use 40 or 60-watt bulbs.

Where fluorescent lighting is used, on 80-watt tube fixture, or two 40-watt tubes are recommended for rooms which are used most.

Prior to this time the construction of member service extension was done by the lineman, however with the vast amount of work assigned to each lineman, and in order to give a better service to both the members and to those wanting service, the construction crew was created, and it has proven very satisfactory.

Maurice Pigott is the foreman of the crew. He is from Picayune and has had 15 years experience as a lineman and maintenance man with various construction companies and utilities. He was employed by the Delta Construction Company, contractors for the building of the first Rural Electrification lines in this area.

Theodore Lafontaine first began work with the American Telephone Company as he has been in the employ of the Co-op as assistant to Arthur Miller for a number of years and was transferred to the construction crew when it was formed.

Olige Necaise and Alvin Bosarge, began work with the Co-op at the time that the construction work was turned over to J. E. Willcutt, construction engineer, and when this work was discontinued they were transferred to the above crew.

Prior to this time the construction of member service extension was done by the lineman, however with the vast amount of work assigned to each lineman, and in order to give a better service to both the members and to those wanting service, the construction crew was created, and it has proven very satisfactory.

feet. If the light shines through the fixture, be sure it shines evenly—not spottily.

General lighting should be used along with any portable lamp to avoid eye strain which results when there is too great a contrast between the light on your books or news, paper and the dark in the room around. Avoid low, squatly portable lamps and purely decorative lamps which disregard good lighting principles. A good lamp should have a diffusing bowl to reduce glare and soften light, a wide, white-lined flaring shade and sufficient height to give a wide circle of useful light.

How Many Watts,

Use the correct size bulbs in your lighting equipment. For example, a reading lamp with a diffusing bowl requires as a minimum a 100-watt bulb to provide the light required for good seeing. The wattage requirement of a fixture using incandescent bulbs varies in direct proportion with the diameter of the fixture. Thus a 14-inch fixture needs about 150 to 200 watts, a 12-inch fixture requires 150 or 100 watts; a 10-inch fixture, 100 watts; and a 8 or 9 inch fixture uses 75 watts. In smaller diameter bowls use 40 or 60-watt bulbs.

Where fluorescent lighting is used, on 80-watt tube fixture, or two 40-watt tubes are recommended for rooms which are used most.

A 100-watt bulb gives more light than two 50-watt bulbs.

Home planner's note: A good height for placing the convenience outlet for the washer, electric iron, or ironer is about 40-inches from the floor.

EATS New Kind of CANDY

Loses 65 Lbs.

Wears Size 12 Again

Now all you have to do to lose ugly fat is to eat this delicious new kind of candy called AYDS. Once 180 lbs., Dorothy J. Miller, 2933 W. 70th St., Chicago, lost 6 lbs. weekly for 13 weeks, with the remarkable NEW AYDS.

PROOF POSITIVE! Eminent physicians supervised clinical tests and report quick and safe losses of 12 to 15 pounds with over 100 users.

WHY EXPERIMENT?
No exercise. No dieting. No drugs. Eat all you want. Absolutely Harmless!

You simply take AYDS before meals which automatically curbs the appetite. The result is you eat less and lose weight. Only \$2.89 for a full 30-day supply—possibly more than you will need. Your money refunded on the very first box if you fail to lose weight. Come in or phone.

This picture shows the electrically driven blower fans used in the hay drier which has been recently installed by L. O. Crosby and Son on their farm near Cybus, in Pearl River County.

The next picture shows how hay is stored in the drying shed or rack. The hay is hauled and stored as soon as it is cut without any drying in the field.

The blower fans then circulate air through the hay which can be baled and stored or left in the dryer if the space is not needed.

Rural electrification progressed at a record rate between June 30, 1946 and June 30, 1947, with almost 400,000 farms hooked up to power lines for the first time.

Fuses are safety valves for your electric system. Never replace a blown out fuse by a coin or a wrong size fuse.

For a yard light, REA lighting experts advise a 100-watt to 200-watt bulb in a shallow, weather-proof reflector.

When buying a daylight-type bulb—get a size brighter than the ordinary bulb you would use for the same purpose.

When REA was established 12 years ago, 10 percent of the farms had electricity as compared to 61 percent receiving electric service today.

Electrical specialists estimate that one kilowatt-hour of electricity, costing a few cents, will do as much work as a strong man working hard 24 hours.

REA

Hats Off!!!

TO

REA MANAGER MR. SHATTUCK AND HIS
ASSISTANT MR. WATTS, OFFICE AND FIELD

FORCE AND BOARD OF DIRECTORS

For An excellent job well done in bringing city comforts to Country Homes through the extension of Electric Service in Hancock and adjoining Counties.

KEEP THIS GOOD WORK UP.

ERNEST HENLEY

The oldest employee in point of service with the Coast Electric Power Association is Ernest J. Henley. He started to work for the co-op as a lineman's helper on January 29, 1938, and is now serving as a lineman.

He worked as a railroad engineer for T. Hoffman Olsen Lumber Company for 9 years and for Raymond Concrete and Pile Construction Company as a labor foreman and as a master mechanic and for the S. T. Alcus Lumber Company as Railroad Engineer, Log Scaler, Mill Engineer and electrician, prior to the time that he entered the employ of the Co-op.

He is married to the former Miss Hester Marshall of Piquette and they have three children.

AUDIS G. DAVIS

Audis G. Davis, was employed to the Coast Electric Power Association on July 1, 1948 as a lineman's helper for Ernest Henley. During the war he worked as an electrician for the Delta Shipbuilding Company, and following that he worked for himself as an electrician and plumber.

He is married and has three children, and is a part time Baptist Preacher.

REA

Many of our friends of years standing will be in Bay St. Louis on October 16, 1948 to attend the annual meeting of the membership of the Coast Electric Power Association.

We bid you a hearty welcome and may we extend to you a cordial invitation to drop by and see us.

The pleasures and comforts afforded you with the advent of Electrical power in your section lends us much happiness, and it is our hope that the day is not too far distant when every home in the area served by the Coast Electric Power Association will have service.

Again we Welcome you to Bay St. Louis, and may your stay be pleasant.

HANCOCK

Insurance Agency

Bay St. Louis, Miss.

Farmers keep giving electricity more work to do. Last year, rural consumers, on REA-financed power lines, used an average of 123 KWH monthly as compared to 114 KWH monthly the year before.

J. D. WILLIAMS

J. D. Williams, lineman for the Coast Electric Power Association has had 39 years experience. He began his career with the Arkansas Power and Light Company. He later worked for the Memphis Light and Power Company, and was with the Mississippi Power Company as a lineman for 14 years.

He left the employ of the Mississippi Company and for two years he owned and operated a grocery store, and feeling the urge to return to his old love, he accepted a job of the Co-op on April 16, 1948 and has been in their employ since that time.

that time. She was born in Pearlinton and came to Bay St. Louis about 24 years ago.
